Laboratory Filtration Products

turning science into solutions

Sartorius Laboratory Filtration Products

Filtration and ultrafiltration are unavoidable process steps in nearly all environmental, chemistry and bio scientific laboratory applications.

Sartorius supplies a wide range of individual filter papers, microporous membranes, filtration devices, ultrafiltration devices and protein purification devices to suit these applications. This catalogue provides a condense overview of the Sartorius Lab Filtration product range, please contact us directly for specialty catalogues, available for in depth technical information.

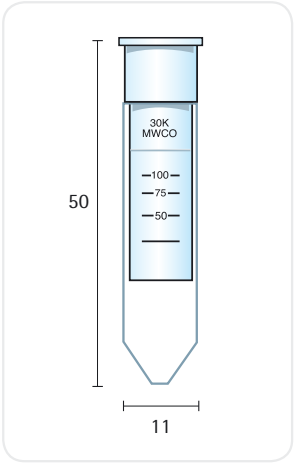
Protein Concentration

Vivaspin® 500



100 µl to 500 µl Samples

Vivaspin® 500 µl centrifugal filter units offer a simple, one step procedure for sample preparation. They can effectively be used in a fixed angle rotors accepting 2.2 ml centrifuge tubes.

The patented vertical membrane design and thin channel filtration chamber (US 5,647,990), minimises membrane fouling and provides high speed concentrations, even with particle laden solutions.

Technical Specifications

Vivaspin® 500

Concentrator capacity	Swing bucket rotor	do not use
	Fixed angle rotor	500 µl
Dimensions	Total length	50 mm
	Width	11 mm
	Active membrane area	0.5 cm^2
	Hold-up volume, membrane and support	< 5 µl
	Dead stop volume	5 µl
Materials of construction	Body	Polycarbonate
	Filtrate vessel	Polypropylene
	Concentrator cap	Polycarbonate
	Membrane	Polyethersulfone

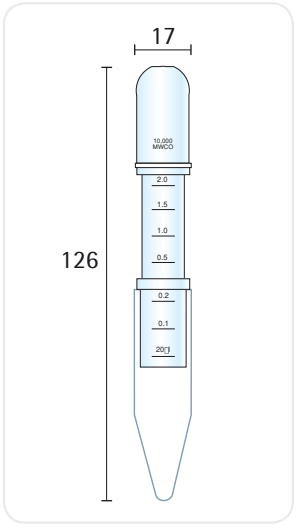
Vivaspin® 2

Choice of Membranes



0.4–2 ml Samples

The Vivaspin® 2 bridges the gap between the 500 µl and 4 ml centrifugal concentrators. This device combines the speed of the classic Vivaspin® products with low internal surface and membrane area for superior recoveries from very dilute solutions.

Available with a choice of PES, Cellulose Triacetate and Hydrosart® membranes, Vivaspin® 2 offers the highest flexibility for process optimisation.

Also unique to the Vivaspin® 2, is the choice of directly pipetting the concentrate from the dead stop pocket built into the bottom of the concentrator, or alternatively reverse spinning into the concentrate recovery cap which can then be sealed for storage. Both methods result in near total concentrate recoveries.

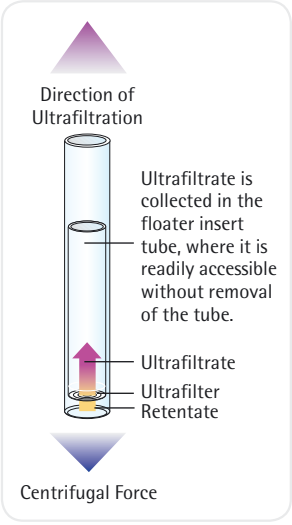
Ordering Tips

- Choose a membrane pore size at least 50% smaller than the size of the molecule to be retained.
- Usually choose Polyethersulfone membranes for fastest concentrations.
- Usually choose Cellulose Triacetate for Protein Removal | Ultrafiltrate recovery.
- Usually choose Hydrosart® membranes for highest recovery with Ig fractions.

Centrisart I



0.5–2.5 ml Samples
Centrisart I is a ready to use unit for small volume centrifugal ultrafiltration to separate proteins from low molecular weight substances in biological samples.

Centrisart I features a unique design, ultrafiltration in the opposite direction to the centrifugal force. This is so effective in preventing premature blockage of the filter that even whole blood samples can be deproteinized.

The ultrafiltrate is collected in the floater insert tube, where it is readily accessible without removing the tube.

Typical Applications Include:
– drug binding studies
– determination of metabolites in serum
– protein removal from blood samples
– cleaning of liposomes
– virus removal

Vivaspin® 4

1–4 ml Samples

Vivaspin® 4 ml concentrators are disposable ultrafiltration devices for the concentration of biological samples. Maximum initial sample volumes range from 1 ml to 4 ml. They can be effectively used in either swing bucket or fixed angle rotors accepting 15 ml centrifuge tubes.

The patented vertical membrane design and thin channel filtration chamber (US 5,647,990) minimises membrane fouling and provides high speed concentrations, even with particle laden solutions.

Vivaspin® 4 is available with the high flux polyethersulfone membrane range which is recommended for most solutions.

Vivaspin® 6

2–6 ml Samples
Vivaspin® 6 ml concentrators have been developed to offer increased volume flexibility and performance.

Vivaspin® 6 can process an impressive 6 ml in either swing bucket or fixed angle rotors accepting standard 15 ml conical bottom test tubes.

The Vivaspin® 6 features twin vertical membranes for unparalleled filtration speeds and 100× plus concentrations. Remaining volume is easy to read off the printed scale on the side of the concentrator and the modified dead stop pocket further simplifies direct pipette recovery of the final concentrate.

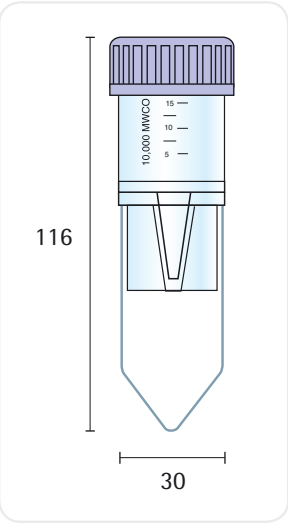
Vivaspin® 15R

2–15 ml Samples
Vivaspin® 15R is targeting the volume segment 2 to 15 ml with a modified regenerated cellulose membrane; Hydrosart®. This membrane is ideal where extremely high recovery with very low adsorption is needed, for example in applications such as desalting and concentration of Ig fractions.

- Ultimate recovery at low adsorption (95-98%)
- Extremely short concentration time (30× in 15 min.)
- Convenient application protocol with easy handling
- Easy scale-up to Vivaflow 200 with Hydrosart® membrane for volumes up to 5 litres
- Very small hold up volume (< 20 µl)



Technical Specifications

Vivaspin® 15R

Concentrator capacity	Swing bucket rotor	15 ml
	Fixed angle rotor	12.5 ml

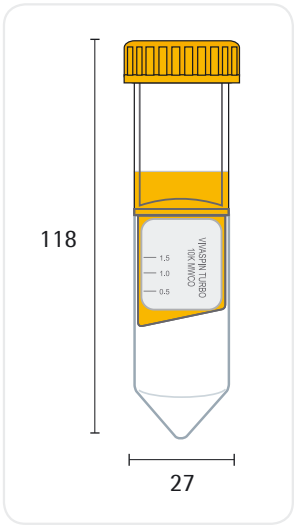
Vivaspin® Turbo 15



4 – 15 ml

Vivaspin® Turbo 15 is the newest member of the ultrafiltration family and allows fastest sample concentration with highest recoveries. This device can handle up to 15 ml sample volume in swing bucket rotors and 11 ml in fixed angle rotors accepting 50 ml centrifuge tubes.

The Vivaspin® Turbo 15 optimized design and sleek internal profile ensure maximum process speeds right the way down to the last few micro litres leading to > 100 fold concentration.

The UV joining technology allows for a smooth joint transition between membrane and plastic housing, allowing the collection of the complete concentrated sample into the unique pipette friendly dead stop pocket.

Technical Specifications

Vivaspin® Turbo 15

Materials	Body	Styrene butadiene copolymere
	Filtrate vessel	Polypropylene
	Concentrator cap	Polypropylene
	Membrane	Polyethersulfone (PES)

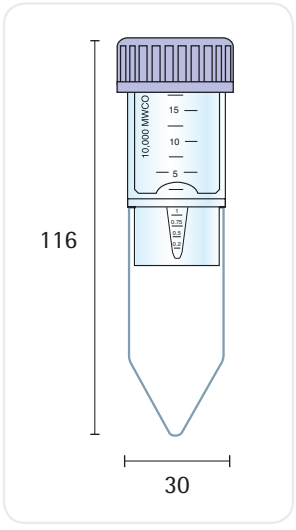
Vivaspin® 20



5–20 ml Samples
Vivaspin® 20 ml centrifugal concentrators have been developed to offer increased volume flexibility and performance.

Vivaspin® 20 handles up to 20 ml in swing bucket centrifuges and 14 ml in 25° fixed angle rotors accepting 50 ml centrifuge tubes.

Featuring twin vertical membranes for unparalleled filtration speeds the Vivaspin® 20 can achieve 100x plus concentrations.

Remaining volume is easy to read off the printed scale on the side of the concentrator and the modified dead stop pocket further simplifies direct pipette recovery of the final concentrate.

More Process Flexibility
Vivaspin® 20 is available with unique accessories and operating methods that are designed to provide more process flexibility and further time saving.

Gas Pressure Filtration
When an appropriate centrifuge is unavailable, or for single sample processing, Vivaspin® 20 can be filled with up to 15 ml and then pressurised for bench top concentration. For even faster processing, gas pressure can be combined with centrifugal force. "Pressure-fugation" is particularly suitable for difficult or viscous samples such as serum, or when using a low process temperature which reduces filtration speed, and generally when minimum process time is essential.

Technical Specifications

Vivaclear Centrifugal Filters

Vivaclear centrifugal filters are disposable microfiltration devices for the fast and reliable clarification | filtration of biological samples in the range 100 µl to 500 µl. They can be used in fixed angle rotors accepting 2.2 ml centrifuge tubes.

Product Features
- High-flux Polyethersulphone membrane
- 0.8 µm pore size
- Low hold up volume (<5 µl)
- Fast and reproducible performance

Applications
- Clarification of samples before loading onto Vivapure® protein purification spin columns
- Removal of particles and participates
- Filtration of plasma and serum
- Filtration of cells or cell debris

Technical Specifications

Vivaclear Centrifugal Filters

Vivacell 70

10–70 ml Samples

Vivacell 70 combines the ease of use of centrifugal devices with the flexibility and control provided by pressurised ultrafiltration cells. Vivacell 70 is inexpensive, quick and easy to assemble, requires no tubing connections or stirring mechanisms and can be adapted to equipment availability or to specific user preferences.

For convenience, simply spin in a large capacity centrifuge (rotors accepting 250 ml bottles). For highest speeds particularly with difficult samples, pressurise the device with air or inert gas before centrifuging.

For more process control or for single samples, combine gas pressure with a gentle orbital shake, or you can even pressurise and then leave standing on a bench top or in a refrigerator for highest simplicity with minimum equipment requirements.

The longitudinal membrane inhibits fouling, whilst the built-in dead stop will hinder further concentration when residual volume drops below 150 µl.

Technical Specifications

Vivacell 70

Concentrator capacity	Swing bucket rotor	70 ml
	Fixed angle rotor	50 ml

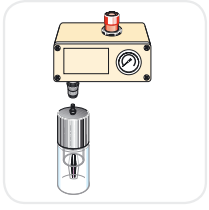
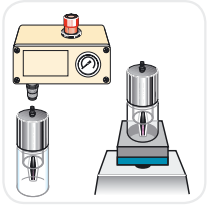
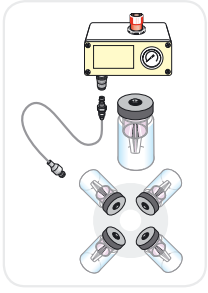
Centrifuge
- Process convenience
- Low shear, no foaming
- Less visual control



Pressure
- Simplicity and highest process control
- Ideal for refrigerated use
- Slower concentrations

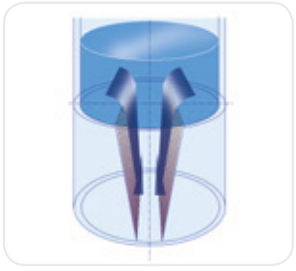


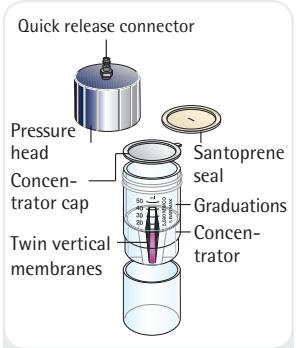
Pressure-Shake
- Speed and process control
- Ideal for single samples
- If left unattended can concentrate to dryness



Pressure-Fuge
- Fastest processing
- Ideal with low MWCO or with difficult solutions
- Less visual control

Vivacell 100





Filtrate container fits standard 250 ml rotors

20–100 ml Samples
Vivacell 100 is the latest member of the Vivacell family and bridges the volume range between the Vivacell 70 and the Vivacell 250.

The patented vertical membrane design allows highest performance and unmatched flexibility.

Vivacell 100 is a unique and innovative concentrator for volumes from 20 ml to 100 ml, which utilizes pressure, centrifuge or pressure-shake to rapidly concentrate even samples with very high particle loading.

Vivacell 100 is designed for centrifugal concentration of samples up to 100 ml which makes it the largest centrifugal unit available. At the same time, the new construction design allows for maximum centrifugal force of 4,000 × g to be used for even faster concentration.

Vivacell 100 Utilizes:
– Pressure
– Centrifuge
– Pressure-shake

Like the smaller Vivacell 70 unit, Vivacell 100, when used as a centrifugal device, fits only into swing bucket rotors accepting 250 ml bottles.

Vivacell 100 units can also be used for single or extremely sensitive samples in the pressurized mode only and left on the bench or placed on a laboratory shaker for faster concentration. It can also be kept in a pressurized mode in the refrigerator. Handling is made easy by use of quick connectors. In whichever mode Vivacell 100 is used, the vertical membrane design inhibits membrane fouling while the built-in dead stop impedes concentration to dryness and loss of sample.

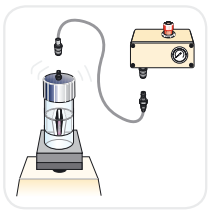
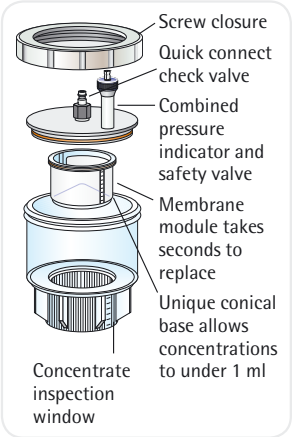
Centrifuge
- Process convenience
- Low shear, no foaming
- Less visual control

Pressure
- Simplicity and highest process control
- Ideal for refrigerated use
- Slower concentrations



Pressure-Shake
- Speed and process control
- Ideal for single samples

Vivacell 250



50–250 ml Samples

The Vivacell 250 is a totally new concept for the concentration of larger biological samples. This product offers numerous advantages when compared to stirred cells.

- One size handles a volume range from under 50 ml to 250 ml.
- Use free standing on a bench top or in a refrigerator for maximum simplicity, or use on laboratory shaker for fastest concentrations.
- The unique conical dead stop built into the bottom of the membrane insert allows concentrations to under 1 ml.
- The gentle vortex action controls membrane polarisation whilst greatly reducing the shear effects typical of stirring mechanisms.
- Set up or membrane replacement takes just a few seconds. Quick connect fittings and simple screw closure further enhance ease of use.

Unique membrane module takes seconds to replace. Concentrate can be easily monitored through the graduated inspection window.

Technical Specifications

Vivacell 250

Concentrator capacity	250 ml	
Max pressure	4 bar (60 psi)	
Dimensions	Width	116 mm
	Height (incl. pressure indicator)	235 mm

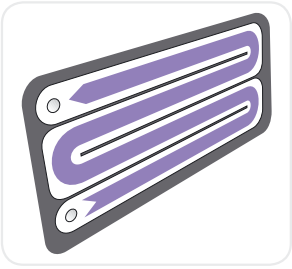
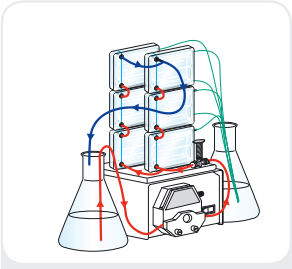
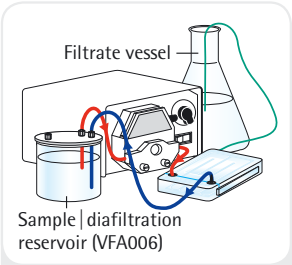
Vivaflow 50





Multiple modules



Single module

100 ml to 3 Litres
The unique and patent protected Vivaflow 50 system provides a standard of ease of use, performance, flexibility and economy which is unrivalled by any laboratory or pilot scale filtration system on the market.

Unique Features
- Thin channel flip-flow recirculation path provides high cross flow velocities with minimum pump requirements.
- No need for pressure holders.
- Crystal clear for simple control of remaining hold up and membrane status.
- Unique Interlocking modules with series connectors for easy scale up.
- Disposable.

Unique Performance
- A single 50 cm^2 module will typically reduce 500 ml to less than 15 ml in under 50 minutes.
- Less than 10 ml minimum system recirculation for highest concentrations.
- Less than 500 µl non recoverable hold up volume.
- Near total recoveries achievable with a single 10 ml rinse.

Unique "flip-flow" thin channel flow path results in high turbulence and linear velocity for exceptional flux even at high concentrations

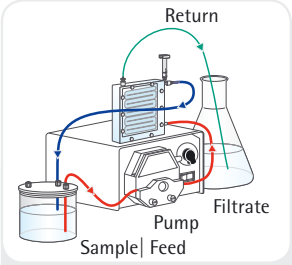
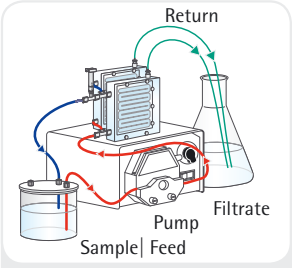
Vivaflow 50R



Vivaflow 50R – Single module



Vivaflow 50R – Two modules

0.1 to 1 Litre
Concentrate 100 ml to under 20 ml in just a few minutes or concentrate one litre 50 times in less than 60 minutes. Alternatively, speed up your process and use two Vivaflow 50Rs in parallel and concentrate 1 litres in under 30 min.

Vivaflow 50R is a plug and play laboratory cross flow cassette for concentrating up to 1 L aqueous samples. The active membrane area per device is 50 cm^2. One unit comes with all necessary accessories for running the device with a laboratory pump and a size 16 pump head. For speeding up the concentration, two cassettes can be run simultaneously.

- Fast and easy protein sample concentration
- Re-usable
- Concentrates volumes from 0.1 L –1 L
- Optimal for cell culture supernatant and virus concentration
- Smallest cross flow cassette with premium Hydrosart® membrane

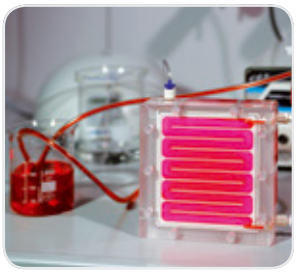
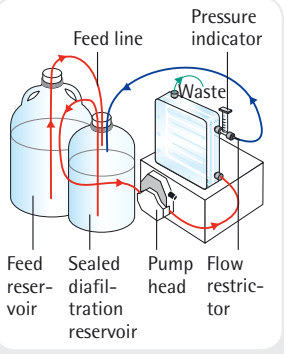
Vivaflow 200





Vivaflow 200 set-up for diafiltration

0.5 to 5 Litres

Concentrate 250 ml to under 20 ml in just a few minutes or concentrate one litre 50 times in less than 30 minutes. Alternatively, use two Vivaflow 200's in parallel and concentrate 5 litres in under 75 minutes.

Near total sample recoveries can be expected with most solutions.

The economical standard package comes complete with tubing, pressure indicator, flow restrictor and high pressure pump tubing. All you need is a peristaltic pump capable of handling 6.4 mm OD (size 16) tubing. Should your pump head require larger tubing, link your own peristaltic tube up to the standard product, using the interconnector provided.

Two modules in parallel will concentrate 5 litres in under 75 minutes

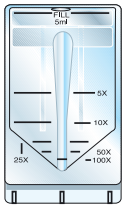
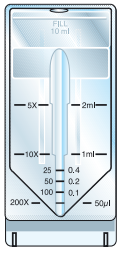
Vivapore Solvent Absorption Concentrators



Vivapore 5



Vivapore 10 | 20

3 ml–20 ml Samples
With no need for additional equipment, pressure or vacuum, solvent absorption is the most economic and user friendly concentration technique available to the clinician and research scientist.

Just fill the unit with the solution to be concentrated, wait for the desired concentration level to be achieved and then pipette the concentrated sample from the bottom of the reservoir.

Vivapore is ideal for general purpose laboratory concentration or purification prior to further analysis. It is particularly suited for labile solutions that can denature with alternative shear or pressure inducing methods or that require processing in a cold room environment.

Vivapore concentrators extend the solvent absorption technique to a totally new level of performance, application potential and ease of use.

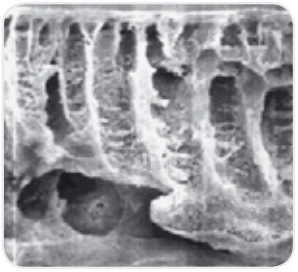
Ultrafiltration Membrane Filters

PES 146, CTA 145 and Hydrosart 144



Polyethersulfone (PES)
This is a general purpose membrane that provides excellent performance with most solutions when retentate recovery is of primary importance. Polyethersulfone membranes exhibit no hydrophobic or hydrophillic interactions and are usually preferred for their low fouling characteristics, exceptional flux and broad pH range.

Cellulose Triacetate (CTA)
High hydrophilicity and very low non-specific binding characterize this membrane. Cast without any membrane support that could trap or bind passing microsolutes, these membranes are to be preferred for sample cleaning and protein removal and when high recovery of the filtrate solution is of primary importance.

Hydrosart
These membranes are also highly hydrophillic and are often preferred for their higher protein recovery when processing very dilute solutions. Resistance to autoclaving, ease of cleaning and extended chemical resistance also characterize this type of membrane.

Technical Specifications

Typical Performance for Polyethersulfone, Type 146

Thickness	120 µm	
pH range	1–14	
Waterflux	MWCO 10,000	0.2 ml/min/cm^2
Protein retention	Cytochrome C	95%

Specifications for Cellulose Triacetate, Type 145

Thickness	120 µm	
pH range	4–8	
Waterflux	MWCO 10,000	0.11 ml/min/cm^2
Protein retention	Cytochrome C	90%

DNA Concentration

Vivacon® 500

For DNA Sample Desalting and Concentration

Reproducible DNA and Protein Sample Desalting and Concentration
Vivacon® 500 centrifugal concentrators offer the optimal solution for DNA and protein concentration and buffer exchange applications. For optimal performance with very dilute samples, e.g. forensic samples, Vivacon® 500 is equipped with the patented regenerated cellulose membrane Hydrosart®.

High recoveries and excellent reproducibilities are paired with convenience offered by molecular weight cut-off printed on individual devices.

The possibility of a re-spin after sample processing assures complete concentrate recovery which is especially important when working with low sample concentrations.

New: Vivacon® 500-PCR Grade
When using DNA amplification technologies, any traces of DNA originating from the equipment have to be eliminated.

Vivacon® 500-PCR Grade units are treated with ethylene oxide (ETO) in a validated process in order to deactivate all traces of DNA that might interfere with subsequent amplification procedures.

Vivacon® 2

For DNA Sample Desalting and Concentration

Reproducible DNA Sample Desalting and Concentration
Vivacon® 2 centrifugal concentrators offer the optimal solution for DNA and protein concentration and buffer exchange applications. For optimal performance with very dilute samples, e.g. forensic samples, Vivacon® 2 is equipped with the patented regenerated cellulose membrane Hydrosart®.

High recoveries and excellent reproducibilities are paired with convenience offered by volume graduation and molecular weight cut-off printed on individual devices.

The possibility of a re-spin after sample processing assures complete concentrate recovery which is especially important when working with low sample concentrations.

New: Vivacon® 2-PCR Grade
Vivacon® 2-PCR Grade units are treated with ethylene oxide (ETO) in a validated process in order to deactivate all traces of DNA that might interfere with subsequent amplification procedures.

Technical Specifications

Concentrator capacity	Fixed angle rotor	2 ml
Dimensions	Total length (Concentration)	125 mm
	Total length (Back-spin)	115 mm
	Width	16 mm
	Active membrane area	0.95 cm^2
	Hold-up volume membrane and support	10 µl
	Dead stop volume (25° rotor)	55 µl
Materials of construction	Body	Polycarbonate
	Filtrate vessel	Polypropylene
	Back spin vial	Polypropylene
	Concentrator cap	Polypropylene
	Membrane	Hydrosart®

Endotoxin Concentration

43 Vivaspin® Endotest

Vivaspin® Endotest

Vivaspin® Endotest is a disposable ultrafiltration device for endotoxin concentration and removal of substances interfering for the LAL test from liquid samples.
The Vivaspin® Endotest is certified endotoxin free and available with a cellulose triacetate membrane of 20.000 MWCO.
Due to the centrifugal design, Vivaspin® Endotest gives the opportunity to work in parallel which minimizes hands-on-time.

Vivaspin® Endotest can effectively be used in either swing bucket or fixed angle rotors accepting 50 ml conical bottom centrifuge tubes.

Technical Specifications

Concentrator capacity	Swing bucket rotor	15.0 ml
	Fixed angle rotor	12.5 ml
Dimensions	Total length	116 mm
	Diameter	30 mm
	Active membrane area	3.9 cm^2
	Deadstop volume	30 µl
	Non-recoverable (hold-up) volume	≤ 10 µl
Materials of construction	Body	Polycarbonate
	Filtrate vessel	Polycarbonate
	Concentrator cap	Polypropylene
	Membrane	Cellulose triacetate

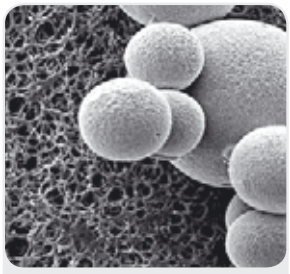
Protein Purification

Vivapure®

Ion Exchange Protein Purification Products



Chromatography gel beads (right) are shown on top of a membrane adsorber in this SEM picture. The membrane adsorber pores are over 50 + larger than bead pores.

Fast and Easy-to-Use Spin Columns
Vivapure® Ion Exchange (IEX) spin columns are centrifugal devices, incorporating Sartobind Membrane Adsorber technology as their chromatography matrix. Vivapure® IEX spin columns make protein purification as easy as filtration. The devices are ready-to-use and do not bear the risk of running dry. For many protein purification applications, they can replace time-consuming and tedious column chromatography.

The rapid 1-2-3 bind-wash-elute protocol especially lends itself to screening applications, where many different samples are processed in parallel.

The Sartobind Membrane Adsorber Matrix
Sartobind IEX membrane adsorbers are based on stabilized regenerated cellulose and display a microporous structure with a pore size of > 3 µm, which is orders of magnitude larger than conventional chromatographic gel materials. This allows molecules to be transported to the ligands immobilized on the membrane adsorber by convective flow, leading to very high flow rates.

In contrast to that, gel chromatography is slowed down due to diffusion limitations, as the molecules need to enter the small bead pores in order to be bound by the ligands. The porous membrane adsorber enables fast, reproducible and scalable protein purification.

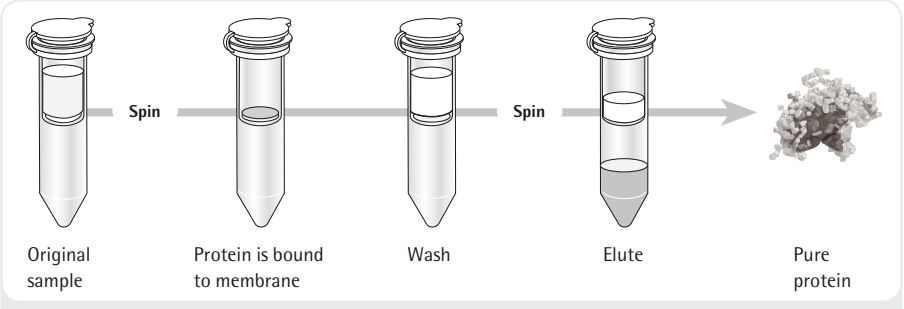
Fast and Simple to Use Spin Columns
- Devices are ready to use
- Make protein purification as simple as filtration

Reproducible Results
- No column packing necessary devices are ready to use
- Membrane adsorber spin columns cannot crack or run dry

Centrifugal Devices
- Offer the possibility of working in parallel

Low Bed Volume
- Small membrane adsorber bed volumes allow working with lower buffer amounts, leading in concentrated elution fractions

Up-Scalable Product Range
- Process scale modules are available with the same Sartobind IEX membrane adsorber matrix



Fast and easy protein purification with Vivapure® spin columns

Vivapure® Mini-400|500 µl

Vivapure® Mini & Maxiprep Purification Kits

For a Fast Antibody and His-Tagged Protein Purification

Rapid Purification with High Yields
Vivapure® miniprep and maxiprep kits are spin column based kits for fast and effective purification of His-tagged proteins and antibodies.

Spin columns have the advantage of speed over gravity drip columns and batch protocols.

With the patented FlowGo regulator the sample residence time is extended to assure adequate sample binding to the resin. Due to this, Vivapure® miniprep and maxiprep spin column kits combine the merits of spin columns and gravity drip columns resulting in rapid purification with up to 95%, protein recovery and purity.

All spin columns can conveniently be used in a centrifuge. For processing larger sample volumes, e. g. from diluted cell culture supernatants, the Vivapure® maxiprep spin columns can additionally be run with a peristaltic pump collar (VS-PPCSC).

The Vivapure® miniprep and maxiprep columns come in a variety of different configurations for your convenience. They can be purchased as completely ready-to-use kits with buffers and ultrafiltration devices but just as well as stand alone spin columns in small packs or large packs for frequent users.

Virus Purification and Concentration

Vivapure® Virus Purification and Concentration Kits

Recombinant virus vectors are the preferred method for a wide range of gene delivery applications. Especially adenovirus type 5 and VSV-G pseudotyped lentivirus are two frequently utilized viral vectors for in vitro and in vivo applications.

Recombinant Adenovirus Aectors
Recombinant adenovirus vectors are versatile tools in research and therapeutic applications for gene transfer and protein expression in cell lines that have low transfection efficiency with liposomes. After entering cells, the virus remains epichromosomal (i.e. does not integrate into the host chromosome, leaving the host genome unaffected). The delivery of RNAi into cells is becoming a major application for adenovirus vectors.

Lentivirus Vectors
Lentivirus vectors are frequently used in gene transfer studies, due to their ability of gene transfer and integration into dividing and non-dividing cells. The pseudotyped envelope with vesicular stomatitis virus envelope G (VSV-G) protein broadens their target cell range. Lentiviral vectors have been shown to deliver genes into cell types (e.g. neurons, lymphocytes and macrophages) which other retrovirus vectors could not be used for. The lentivirus vector is increasingly used to integrate siRNA efficiently in a wide variety of cell lines and primary cells, both in vitro and in vivo.

Rapid Virus Purification by Membrane Chromatography
The Sartobind® ion exchange membrane adsorber technology used in AdenoPACK and LentiSELECT is unique in its capability to efficiently and rapidly capture and recover large virus particles. When compared to chromatography media, membrane adsorbers provide large 3000 nm pores allowing unrestricted access and recovery of virus from the charged adsorber surface. Convective flow through the syringe filter devices provides high-speed separations not possible with traditional chromatography, cesium chloride density gradients and ultracentrifugation methods. Our membrane adsorbers with porous matrices, high capacities, low differential pressures, high flow rates and low unspecific adsorption show an excellent performance in small scale virus purification. Additionally, they are also scalable and confirm to cGMP facilities to large volume, high performance separation, reducing the processing time by a factor of 10 in the final process.

Adenovirus Purification with Vivapure® AdenoPACK Kits

AdenoPACK 20|100|500
The AdenoPACK adenovirus purification and concentration kits offer researchers who need to recover up to 3×10^{13} purified recombinant adenovirus particles for in-vitro transfection a fast, safe and easy to use solution. The kits include all reagents and devices necessary for clarification, purification and concentration of adenovirus type 5 from HEK293 cell cultures in only two hours. These straight forward kits replace time-consuming and labor-intensive 48 hour CsCl density gradients.

AdenoPACK kits are offered as AdenoPACK 20, AdenoPACK 100 and AdenoPACK 500, for the purification and concentration of adenovirus type 5 from 20 ml to 500 ml cell culture, leading to 1×10^{11}- 3×10^{13} purified viral particles. For each sample volume, the most convenient handling method is offered for ultimate convenience.

To this end, preparations using AdenoPACK 20 are pursued in spin column format in a centrifuge, AdenoPACK 100 is a manually operated kit in syringe filter format*, and AdenoPACK 500 is a pump driven kit.

* Vivapure® AdenoPACK 100 can optionally be operated with a laboratory pump and an infusion pump, for which protocols are provided on our web page www.sartorius-stedim.com. Additionally, the tubes and adaptors needed for these operation modes can be ordered.

AdenoPACK Advantages
Fast and Easy Virus Purification
- Purification completed in 2 hours
- Convenient, over 10 × faster alternative to CsCl density gradient

Quantitative Yields
- In contrast to CsCl density gradient, the complete cell culture is used for virus purification and not only the viral pellet

Flexible Product Range
- Applicable from initial construct screening to large scale virus production

Complete Kit
- Including filtration devices, AdenoPACK units for virus purification, Vivaspin® and all buffers

Low Endotoxin Levels
- High cell viability and infection rates due to endotoxin levels of < 0.025 EU/ml

Technical Specifications

Lentivirus Purification with Vivapure® LentiSELECT Kit

LentiSELECT 40|500|1000
The LentiSELECT lentivirus purification and concentration kits offer researchers who need to recover up to 5×10^9 infective lentivirus particles per ml for invitro transfection or animal studies a fast and easy to use solution.

These straight forward kits replace time-consuming ultracentrifugation protocols, which typically take approximately one day for large sample volumes, thus reducing the purification time to only a few hours.

LentiSELECT kits are offered as LentiSELECT 40, LentiSELECT 500 and LentiSELECT 1000 for the purification and concentration of VSV-G pseudotyped lentivirus from 40 ml to 1000 ml cell culture, leading to 8×10^8 – 1×10^{10} purified infective particles. For each sample volume, the most convenient handling method is offered. To this end, 40 ml sample volumes are processed manually with LentiSELECT 40, while LentiSELECT 500 and 1000 are pump driven kits.

LentiSELECT Advantages

Fast and Easy Virus Purification
- Purification completed in under one to six hours, depending on sample volume
- Kit as easy to use as filtration

No Need for Expensive Instruments
- Lentivirus purification with LentiSELECT is independent of equipment such as ultracentrifuges

High Virus Purity
- Achieve pure virus due to a chromatography purification for your experiments instead of a crude and variable cell culture supernatant pellet

Optimal for Multiple Virus Construct Screening
With LentiSELECT 40, four purification runs can be conducted in parallel with one kit

Complete Kits
- Including LentiSELECT units for virus purification, Vivaspins for concentration|buffer exchange and all buffers and syringes necessary

Low Endotoxin Levels
- High cell viability and infection rates due to endotoxin levels of < 0.025 EU/ml

Filtration Devices

Table of Contents

Minisart® Syringe Filters

Removal of Particles and Microorganisms from Liquids and Gases

Sample Preparation
HPLC | UHPLC | Analytics
Elimination of particles from your samples prior to HPLC or other chromatographic analysis is essential in order to maintain the integrity of your chromatography column and to maximize its operating life.

Minisart® syringe filters consist of a PP housing and membrane components featuring maximum chemical compatibility and minimum extractables to ensure excellent results. See page 60.

Filtration of Aqueous Liquids
Clarification | Sterile Filtration
For clarification and sterilization of liquids, filtration is the optimal method. It removes all microorganisms and particles reliably, without any effects on the ingredients, due to adsorption or decomposition.

For optimal results Minisart® filters made of MBS housing provide high flow rates and lowest adsorption characteristics. The MBS housing is color-coded for an easy pore size identification. See page 63.

Medical Use and Sterile Venting
Special Applications
Minisart® syringe filters are available in a broad range of pore sizes. They are ideal for clarification of liquids laden with particles, e.g. for preparation of pharmaceuticals or infusion solutions. For sterilization and removal of particles from air and other gases, syringe filters are optimal for sterile venting of containers, bioreactors, fermenters and tubing systems in medical devices. Many Minisart® syringe filters have the CE mark of conformity (European directive) and are available in a wide choice of membranes, connectors and housing materials. See page 66.

* Sterile Minisarts are individually packaged. If not stated otherwise, Minisarts have been sterilized by ethylene oxide.Minisarts NOT presterilized: RC, PTFE and Nylon can be sterilized by autoclaving at 121 °C for 30 min/or by using ethylene oxide (EO).

Technical Specifications

Specifications for Minisart® RC, Minisart® SRP, Minisart® NY, 4 mm, 15 mm and 25 mm Membrane Diameter

Application limits	Max. recommended operating pressure 4.5 bar | 65 psi
Housing burst pressure	6 bar | 87 psi and higher
Max. temperature	121 °C, 30 min (autoclave)
Bubble point	Min value with water (RC): ≥ 3.2 bar | ≥ 47 psi (0.2 µm), ≥ 2.0 bar | ≥ 29 psi (0.45 µm) Min value with isopropanol (SRP): ≥ 1.4 bar | ≥ 20 psi (0.2 µm), ≥ 0.9 bar | ≥ 13 psi (0.45 µm) Min value with water (NY): ≥ 3.0 bar | ≥ 44 psi (0.2 µm), ≥ 2.0 bar | ≥ 29 psi (0.45 µm)
Flow rate, 4 mm	Typical values for water at 3 bar – RC: 0.5 ml/min (0.2 µm), 1.5 ml/min (0.45 µm) Typical values for methanol at 1 bar – RC: 1.5 ml/min (0.2 µm), 3.0 ml/min (0.45 µm); SRP: 4.5 ml/min (0.45 µm) Typical values for air at 1 bar – SRP: 60 ml/min (0.45 µm)
Flow rate, 15 mm	Typical values for water at 1 bar – RC: 10 ml/min (0.2 µm), 30 ml/min (0.45 µm); NY: 20 ml/min (0.2 µm), 40 ml/min (0.45 µm) Typical values for methanol at 1 bar – RC: 55 ml/min (0.2 µm), 105 ml/min (0.45 µm); SRP: 55 ml/min (0.2 µm), 150 ml/min (0.45 µm) Typical values for air at 1 bar – SRP: 0.5 l/min (0.2 µm), 1.1 l/min (0.45 µm)
Flow rate, 25 mm	Typical values for water at 1 bar – RC: 60 ml/min (0.2 µm), 100 ml/min (0.45 µm); NY: 75 ml/min (0.2 µm), 130 ml/min (0.45 µm) Typical values for methanol at 1 bar – RC: 160 ml/min (0.2 µm), 325 ml/min (0.45 µm); SRP: 160 ml/min (0.2 µm), 260 ml/min (0.45 µm) Typical values for air at 1 bar – SRP: 1.2 l/min (0.2 µm), 1.8 l/min (0.45 µm)
Water penetration point	Minisart® SRP (hydrophobic PTFE) 4.0 bar (0.2 µm) or 3.0 bar (0.45 µm)

Filtration of Aqueous Liquids

Filtration is the Optimal Method for Clarification and Sterilization of Liquids

Minisart® NML with SFCA

Minisart® High Flow with PES

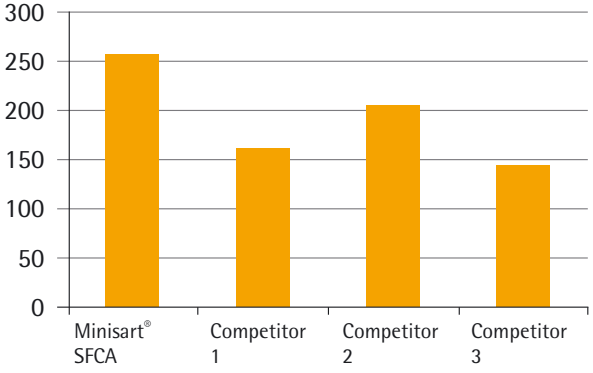
Minisart® Features
- Pore size + membrane color-coded
- Lowest adsorption
- Superior flow rate
- High total throughput
- Low hold-up volume
- Particulate-free
- Minimum extractables
- 100% camera system control
- PVC-free
- Choice of presterilized or non-sterile units
- Gamma irradiated or EO sterilized
- Fully validated, certified quality
- Bidirectional use

Key Specifications

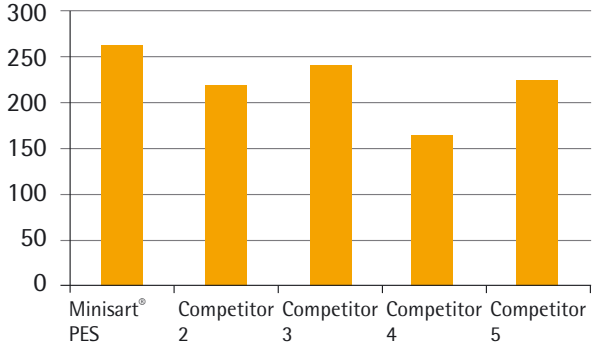
Diameter	Pore Size	Membranes	Housing	Connector Outlets	Hold-Up Volume	Filter Area
28 mm	0.1 µm	PES	MBS*	Male Luer Lock	100-150 µl**	6.2 cm^2
28 mm	0.2 µm	SFCA | PES	MBS*	Male Luer Lock | Male Luer Slip	100-150 µl**	6.2 cm^2
28 mm	0.45 µm	SFCA | PES	MBS*	Male Luer Lock | Male Luer Slip	100-150 µl**	6.2 cm^2
28 mm	0.65 µm	SFCA	MBS*	Male Luer Slip	100-150 µl**	6.2 cm^2
28 mm	0.8 µm	SFCA	MBS*	Male Luer Slip	100-150 µl**	6.2 cm^2
28 mm	1.2 µm	SFCA	MBS*	Male Luer Slip	100-150 µl**	6.2 cm^2
28 mm	5 µm	SFCA	MBS*	Male Luer Slip	100-150 µl**	6.2 cm^2
GF Prefilter	1.2+0.2 | 0.45	GF+SFCA	MBS*	Male Luer Slip	230 µl**	6.2 cm^2
GF Prefilter	1.2 µm	GF	MBS*	Male Luer Lock | Male Luer Slip	200 µl**	6.2 cm^2

* MBS = Methacrylate butadiene styrene polymerizate
** Hold-up volume after air purge. Volumes can vary depending on membrane and liquid used.

Sartorius Advantage: Water Flow at 1 bar (15.4 psi) ml/min



0.45 µm SFCA membrane compared with CA (Cellulose Acetate) or similar hydrophilic membranes



0.45 µm PES membrane compared with other PES membranes

Minisart® Syringe Filters – Preparation of Aqueous Liquids

#-mark indicates sterilization by gamma irradiation
Minisarts NOT presterilized: SFCA can be sterilized by ethylene oxide or gamma irradiation. PTFE can be sterilized by ethylene oxide.

[a] Connector inlet: Male Luer slip (all other Minisarts have female luer lock inlets)

[b] Hose barbs, inlet and outlet, 5 mm diameter

Do you need additional pore sizes?
Would you like to use other membranes?
– Please refer to Minisart® NML available in 0.65, 0.8 and 1.2 µm pore sizes; also available with PES membrane

Would you like to filter solvents, acids or bases?
Do you want to filter small volumes?
Would you like to use PP housings and other membranes?
– Please refer to Minisart® RC, Minisart® NY or Minisart® SRP for the highest chemical compatibility; also available in 4 mm and 15 mm

Technical Specifications

Minisart® Acticosart, Minisart® Air, Minisart® HY, Minisart® Ophthalsart
(Specifications for Minisarts® High Flow, NML, NML Plus, PES and SRP please see on pages 60 and 63)

Application limits	Max. recommended operating pressure: Acticosart 1/14.5; Air 1.5/21.8; HY+Ophthalsart 4.5 bar | 65 psi
Housing burst pressure	6 bar | 87 psi and higher
Max. temperature	50 °C
Bubble point	Min value with water (Ophthalsart): ≥ 3.2 bar | ≥ 46 psi (0.2 µm) Min value with IPA (Air; HY): ≥ 1.4 bar | ≥ 20.3 psi (0.2 µm), ≥ 0.9 bar | ≥ 13.1 psi (0.45 µm) Acticosart: BP not determined
Flow rate	Ophthalsart: 60 ml/min for water at 1 bar | 14.5 psi Air: 1.1 l/min (0.2 µm) for air at 0.1 bar | 1.5 psi HY: 1.4 l/min (0.2 µm), 2.3 l/min (0.45 µm) for air at 0.1 bar | 1.5 psi Acticosart: 2.3 l/min (0.45 µm) for air at 0.1 bar | 1.5 psi
Cytotoxicity	Detectably no inhibition with MRC-5 and L-929 (Ophthalsart)

Sartolab® P20 and Sartolab® P20 Plus

Sterile Filtration of Sample Volumes Up to 5 Liter

Using Sartolab® P 20 or Sartolab® P 20 Plus in Available Systems

Systems with luer lock connectors
Sartolab® units with a luer lock inlet fit directly onto the corresponding connectors of tubing from peristaltic pumps. This configuration can also be used with luer lock syringes.

Systems with Tubing
If the liquid to be filtered will be pumped through open tubing from a pressure tank or a peristaltic pump, then a Sartolab® unit with a hose nipple inlet is required. The stepwise increase in diameter of the nipple, from 6 mm to 12 mm, makes it suitable for a wide range of tubing.

Application and Product Description

Application
The Sartolab® P 20 is a ready-to-use pressure filtration unit for sterile filtration of media and aqueous solutions in batches ranging from 100 ml to 5 l. For media that contain sera and difficult-to-filter solutions, a Sartolab® P 20 Plus unit with an incorporated prefilter is also available.

Security
The effectiveness of every batch of 0.2 µm cellulose acetate membranes for sterile filtration is confirmed by bacteria challenge tests (HIMA) using Brevundimonas diminuta. Only biosafe material is used in the filtration units; they have been proven non-toxic by passing the USP plastics test for toxicity. Tests with MRC-5 human lung cells on cellulose acetate membranes and glass fiber prefilters showed no cytotoxic effects. Finished units are also tested for their sterile filtration capability and for housing and membrane integrity.

Fast Filtration
The combination of a large filtration area (20 cm^2) and the optimal design of the filter support guarantees high flow rates with high total throughputs. Automatic venting of any trapped air through the PTFE membrane-protected vent ports ensures that the entire filter surface is used for effective filtration.

SFCA - Cellulose Acetate, PES - Polyethersulfone, GF - Glass Fiber Prefilter, PC - Polycarbonate

Sartolab® 150v

Disposable PES Vacuum Filtration Unit for Volumes Up to 15 Liter

Description
Sartolab® 150v is a disposable, sterile, ready-to-use membrane filter capsule for highest convenience. Sartolab® 150v capsules are made of a unique hydrophilic Polyethersulfone (PES) membrane providing outstanding total throughput, flow rate performance, low extractables and broadest chemical compatibility.

Applications
Typical applications include sterilizing grade filtration of:
- Biological Fluids
- Purified water
- Media
- Buffers

Compatibility
The PES membrane is compatible with a pH range from pH 1 to pH 14 making Sartolab® 150v ideal for filtration of solutions with high | low pH.

Microbiological Retention
Sartolab® 150v capsules 0.2 µm rated are fully validated as sterilizing grade filters according to HIMA and ASTM F-838-05 guidelines.

Quality Control
Each individual element is tested for integrity by B.-P. and Diffusion-Test before final assembly. Sartolab® 150v capsules are designed, developed and manufactured in accordance with a ISO 9001:2000 certified Quality Management System.

Performance
The unique pleated filter construction combined with the highly asymmetric pore structure of the PES membrane, offers excellent flow rates and superior total throughput performance, especially in comparison to conventional disc filter systems.

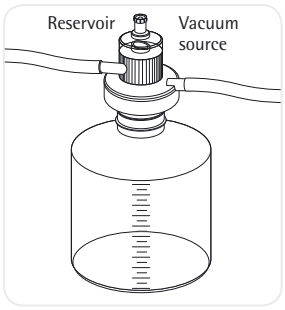
Materials and Data

Filter	Polyethersulfone (PES)
Support Fleece	PP-fleece
Housing	Polypropylene
Vent	PTFE
Pore Size	0.2 µm
Filtration Area	150 cm^2
Flow Rate	1.5 L/min
Total Throughput	15 L

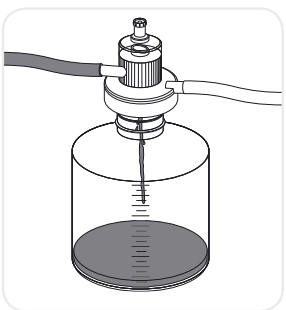
Ordering Information

Units | Pk	Order No.
3	18080-M

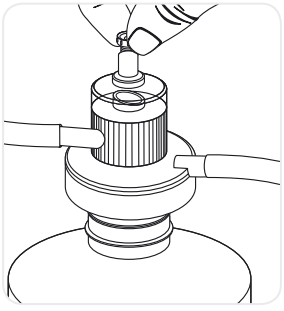
Easy to Use



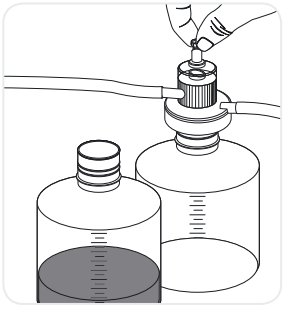
Place Sartolab® 150v on the bottle neck. A vacuum is automatically created when used with a water jet pump or other vacuum source.



Create a vacuum to start filtration.



To fill multiple receiving bottles, break the vacuum with the valve on top of the Sartolab® 150v housing.



To continue filtration with the next receiving bottle, close the valve.

Sartolab® RF | BT

Disposable Filter Systems and Bottle Top Filters

Sartolab® Disposable Sterile Filter Systems and Bottle Top Filters are designed for the vacuum filtration of tissue culture media and components, biological fluids, and other aqueous solutions.

The Sartolab® disposable 150 mL, 250 mL, 500 mL and 1000 mL bottles are designed as storage containers for sterile media, buffers, or other aqueous solutions.

These products are for laboratory use only. Not for human parenteral applications.

Materials
The filter funnels, dust covers and receiver bottles are manufactured from virgin, heavy metal-free polystyrene. The tubing adapters, filter adapters, and the plug seal caps are made from heavy metal-free polyethylene. Sartolab® filter systems are available with polyethersulfone membranes. All units are sterilized by gamma irradiation.

Performance
The filter units contain membranes integrally sealed to a support grid designed to maximize flow and reduce foaming and protein denaturation.

The membrane is compatible with most aqueous solutions and tested for use in cell culture applications.

Filter Systems
The filter adapter utilizes a gasket design to ensure a vacuum-tight seal on the receiver | storage bottle. Each filter unit also contains a convenient tubing adapter that will fit most vacuum hoses.

The bottles are single-use containers. They cannot withstand autoclaving or use at temperatures greater than 70 °C. The suitability of the bottles for storage of solutions below 0 °C depends both on the solution and the storage conditions. Many aqueous solutions, including culture media, have been successfully frozen and stored at temperatures down to -20 °C. However, a trial run under actual conditions is strongly recommended to test the suitability of the bottles for frozen storage.

Pore Size	Membrane Material	Characteristics
0.22 µm	Polyethersulfone	Very low protein binding and low extractables, fast flow rate
0.1 µm	Polyethersulfone	Very low protein binding and low extractables, fast flow rate

Bottle Top Filters
The filter adapter is available in 45 mm thread finish, and is designed to ensure a vacuum tight seal on customer supplied bottles with the appropriate thread finish. Each filter unit also contains a tubing adapter that will fit most vacuum hoses.

Chemical Compatibility
The mechanical strength, color, appearance, and dimensional stability of filter systems, bottle top filters, and plastic bottles are affected to varying degrees by the chemicals with which they come in contact. Specific operating conditions, especially temperature, will also affect their chemical resistance. A table is provided to serve as a general guideline for the chemical resistance of Sartolab® disposable sterile filters and bottles.

Chemical Resistance of Sartolab® Filters

Chemical Class	Membrane (PES)	Housing (PS)
Weak Acids	3	1
Strong Acids	3	2
Alcohols	1	2
Aldehydes	3	3
Aliphatic Amines	1	3
Aromatic Amines	3	3
Bases	3	1
Esters	3	3
Hydrocarbons	3	3
Ketones	3	3

Key: 1, recommended;
2, may be suitable for some applications; a trial run is recommended;
3, not recommended. PS, polystyrene; PES, polyethersulfone.

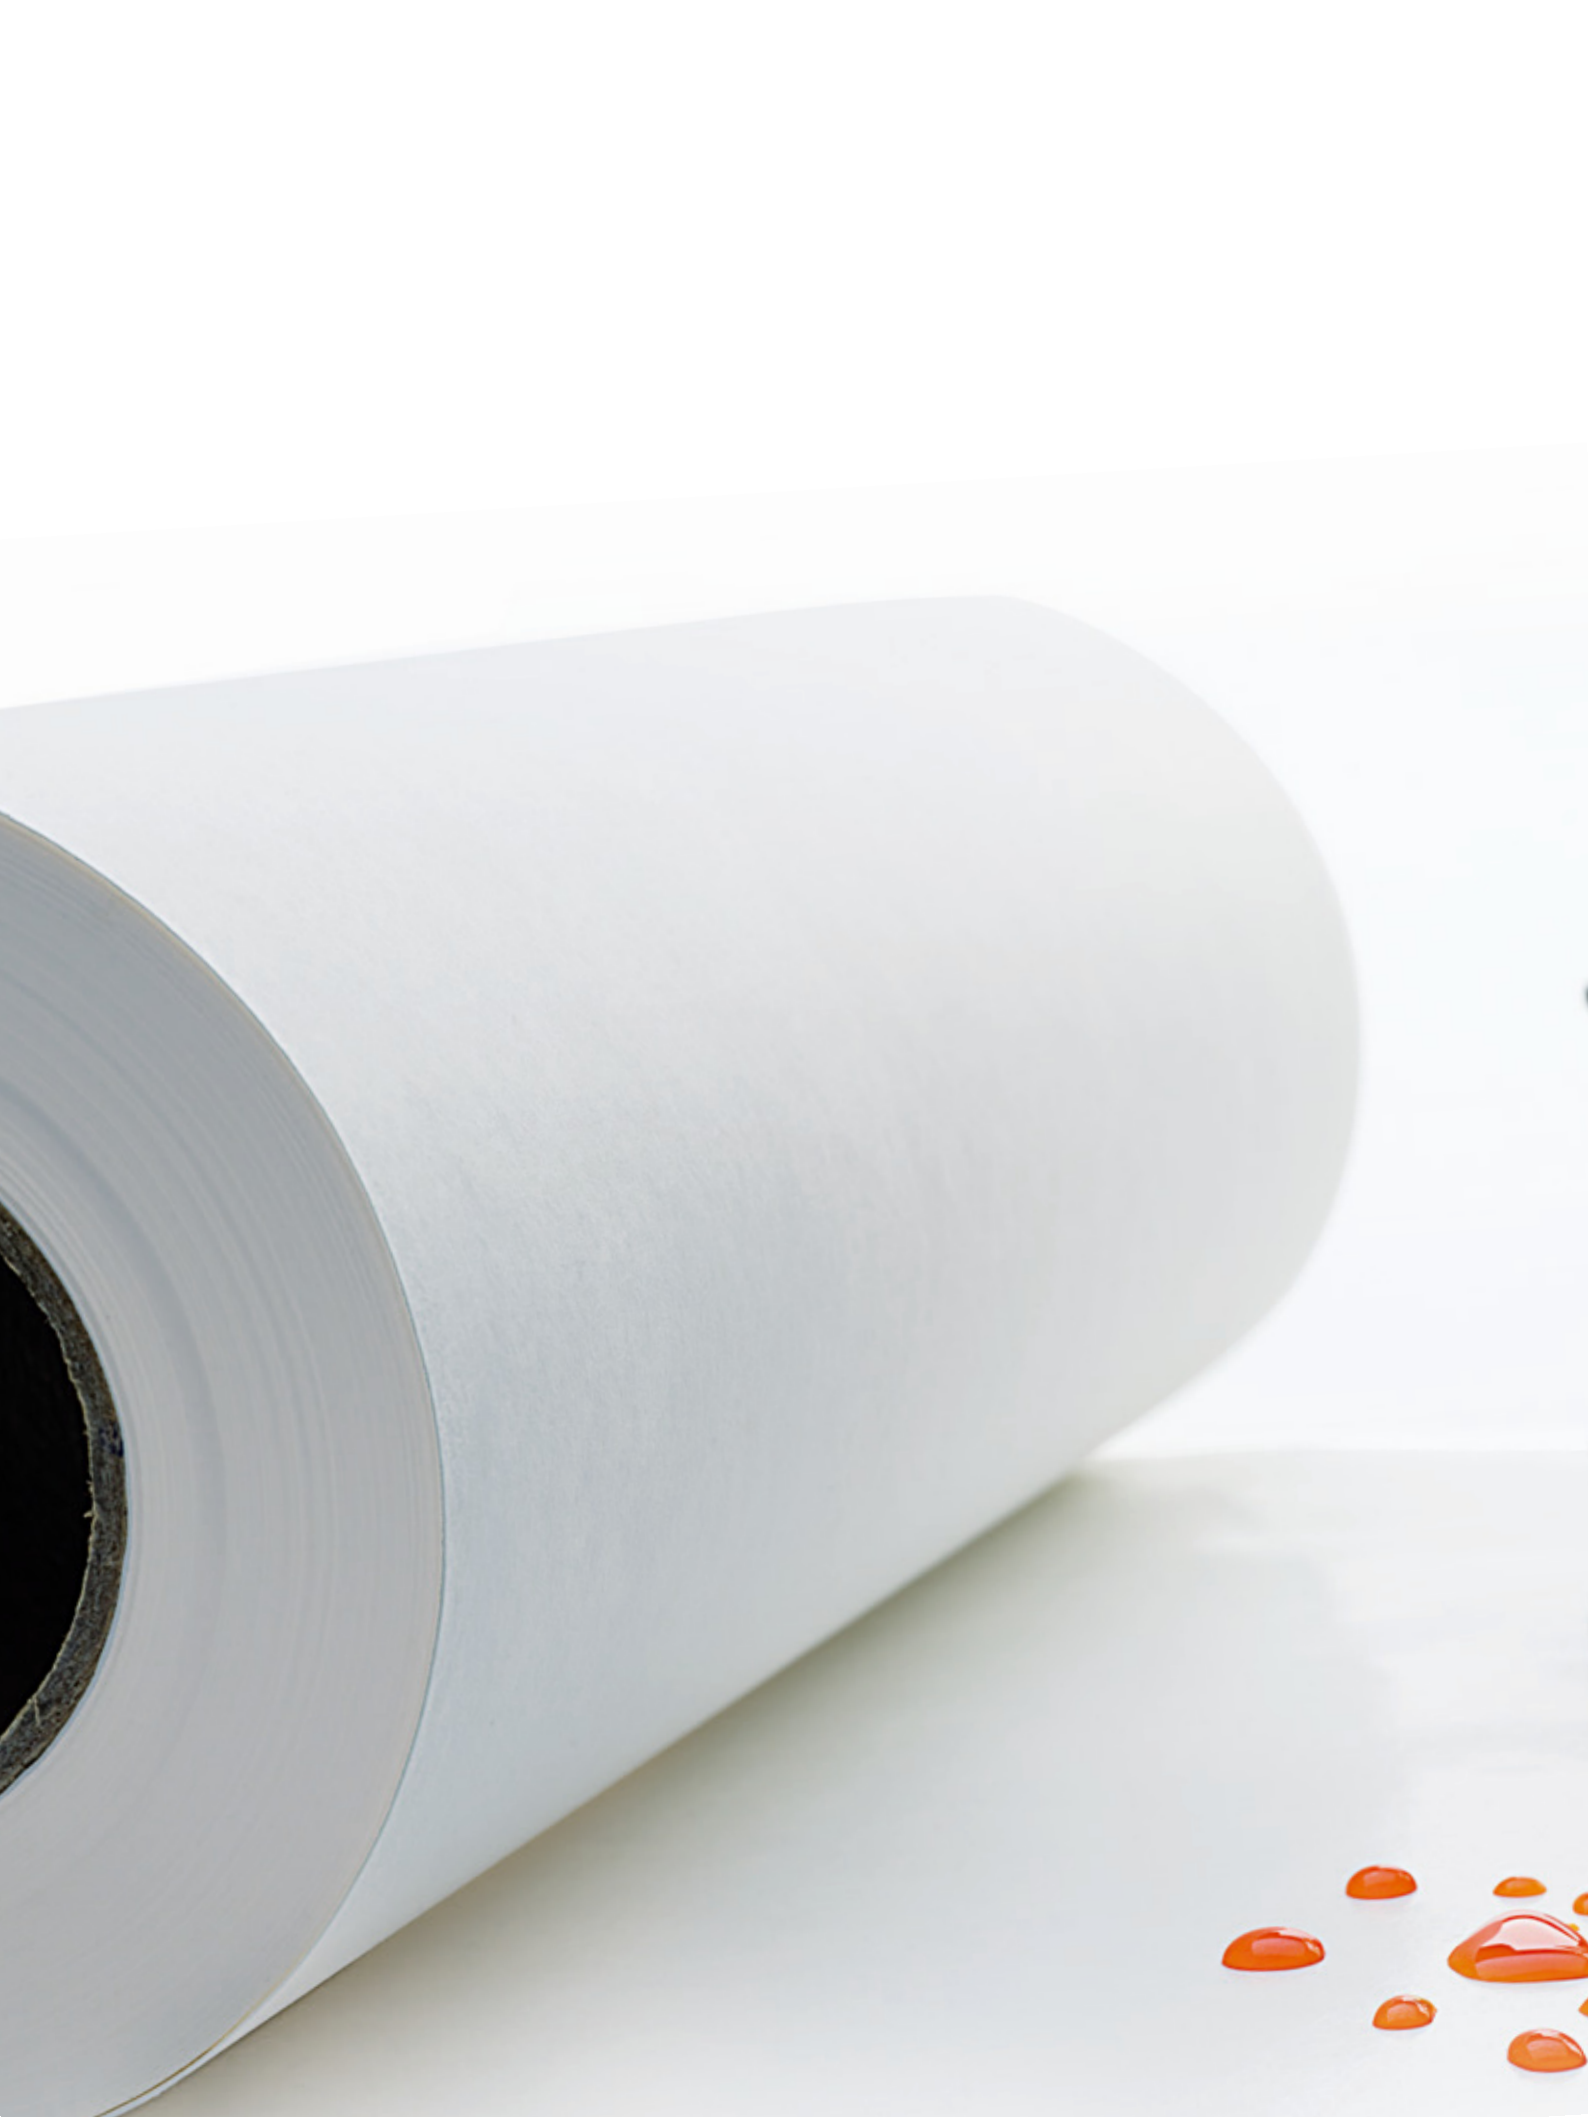
[1] gamma irradiation feasible for Minisart® Air

Contact time: 24 hours at 20 °C. Chemical compatibilities can be influenced by various factors. Therefore, we recommend that you confirm compatibility with the liquid you want to filter by performing a trial filtration run before you start your actual filtration.



Basic Filtration

Table of Contents

Ash-free Filter Papers

For Quantitative and Gravimetric Analyses

These filter papers are used for quantitative and gravimetric analyses as well as for pressure or vacuum filtration. They are made out of 100% cotton linters with an α-cellulose content of > 98% and are acid-washed to make the papers ashless and achieve high purity.

Technical Specifications

Grade	Weight (g/m²)	Thickness (mm)	Particle Retention (µm)	Filtration (s)	Precipitates	Properties
388	84	0.21	12-15	10	Coarse crystalline	Wide-pore, lose structure, fast filtering

Wet-strengthened Filter Papers

For Qualitative Analyses

These qualitative filter papers are essentially used for analytical purposes and routine analyses, whenever no gravimetric analyses are required. They are wet-strengthened and can be used for pressure and vacuum filtration. They are made of refined pulp and linters with an >95% α-cellulose content, are very pure with an ash content ≤0.1%.

Technical Specifications

Grade	Weight (g/m^2)	Thickness (mm)	Particle Retention (µm)	Filtration (s)	Precipitates	Properties
1288	84	0.21	12-15	10	Coarse crystalline	Wide-pore, lose structure, fast filtering
1289	84	0.21	8-12	20	Medium-fine crystalline	Medium- to wide-pore, medium fast filtering
1292	84	0.17	5-8	50	Fine crystalline	Medium dense, medium fast filtering
1290	84	0.21	3-5	100	Fine crystalline	Narrow-pore, dense, slow filtering
1291	84	0.16	2-3	180	Very fine crystalline	Fine-pore, dense, very slow filtering
293	80	0.15	1-2	300	Very fine crystalline	Very fine-pore, very dense, very slow filtering

High-Purity Filter Papers

For Qualitative Analyses

These paper grades are used for analytical purposes that require a low ash content. Grades 292 and 292a are especially suitable for soil analyses because they are low in nitrogen. For phosphate or sodium determination, we recommend grades 131 and 132.

Technical Specifications

Grade	Weight (g/m^2)	Thickness (mm)	Particle Retention (µm)	Filtration (s)	Material
292	87	0.18	5-8	45	Cotton linters, low-nitrogen and nitrates, ash content ≤ 0.06% according to DIN 54370
292a	97	0.19	4-7	60	Cotton linters, low-nitrogen and nitrates, ash content ≤ 0.06% according to DIN 54370
131	80	0.16	3-5	100	Cotton linters and refined pulp, low-phosphate and low sodium, ash content ≤ 0.02% according to DIN 54370
132	80	0.17	5-7	55	Cotton linters and refined pulp, low-phosphate and low sodium, ash content ≤ 0.02% according to DIN 54370

Filter Papers

For Qualitative-Technical Analyses

These filter papers are used for routine analyses like clarification, determination of substances, but also as discs with a center hole for technical applications. Grades with a wet burst resistance > 30 kPa are referred to as wet-strengthened and are therefore suitable for pressure or vacuum filtration. They are made of refined pulp and linters with an > 95% α-cellulose content, are very pure with an ash content between <0.1-0.15%. Below you will find an overview of the most commonly used grades.

Technical Specifications

Grade	Surface	Weight (g/m²)	Thickness (mm)	Filtration (s)	Wet Burst Resistance (kPa)	Properties
3 hw	Smooth	65	0.14	20	> 40	Medium fast filtering, filter paper for routine work in the lab
4 b	Smooth	75	0.15	22	> 15	Medium fast filtering, filtration of coarse precipitates, wick paper for seed testing
603/N	Crêped	75	0.25	8	> 50	Fast filtering, filtration of sugar solutions
6	Smooth	80	0.17	15	> 30	Fast filtering, degassing beer before analysis, clarification of spirits
100/N	Smooth	85	0.18	30	> 80	Medium fast filtering, ash content < 0.1%, low potassium and sodium content, determination of the sugar content
5 H/N	Crêped	85	0.28	3	> 40	Very fast filtering, wide-pore, filtration of essential oils
3 S/h	Smooth	200	0.36	55	> 15	Medium fast to slow filtering, narrow-pore, re-wet test for diapers

Glass Microfiber Filters

Without Binder

Binder-free glass microfiber filters are recommended for analytical and gravimetric analyses and also as prefilters. These filters combine fast flow rates with high load capacity and the retention of very fine particles; they are biologically inert, are resistant to most chemicals and withstand temperatures up to 500 °C (grade 550-HA up to 550 °C).

Technical Specifications

Grade	Weight (g/m^2)	Thickness (mm)	Air Resistance (mbar)	Particle Retention (µm)	Filtration (s)	Main Applications

Glass Microfiber Filters

With Binder

These filters are mostly used either for monitoring air and gas or as prefilter. They are manufactured with synthetic binding agents to ensure that the filter has a defined strength. They are mechanically and chemically stable, have a temperature resistance up to 180 °C and – depending on the binding agent used – are either hydrophobic or hydrophilic.

Technical Specifications

Grade	Weight (g/m^2)	Thickness (mm)	Air resistance (mbar)	Retention Rating 0.12–0.3 µm Particulate Matter (%)*	Filter Class	Binding Agent

Quartz Microfiber Filters

These quartz microfiber filters are free of glass fibers and binding agents. They are especially suited for emission monitoring at temperatures of up to 900 °C and wherever filters of the highest purity are needed (such as for air monitoring according to US EPA PM 10 or trace element analyses).

They are available in two grades:
– Grade T 293, quartz microfiber filters unconditioned
– Grade MK 360, quartz microfiber filters conditioned (heat pre-treated); Certificate on trace elements available for every batch.

Technical Specifications

Grade	Material	Weight (g/m²)	Thickness (mm)	Retention 0.3 µm Particulate Matter (%)*	Penetration 0.3 µm Particulate Matter (%)*
T 293 | MK 360	100% Quartz microfiber silicium dioxide (SiO_2)	85	0.43	99.998	< 0.002

* Tested and classified according to the standards EN 1822-1:2009

Extraction Thimbles

Thimbles are supplied in three different thimble designs to cover the majority of application areas. The cellulose or glass microfiber thimbles are primarily used in Soxhlet extraction units to extract defined substances from solids for further analyses. Quartz microfiber thimbles are preferred for emission control due to their high temperature resistance. They are supplied in a large variety of diameters and lengths. Below you will find an overview of the most commonly used grades.

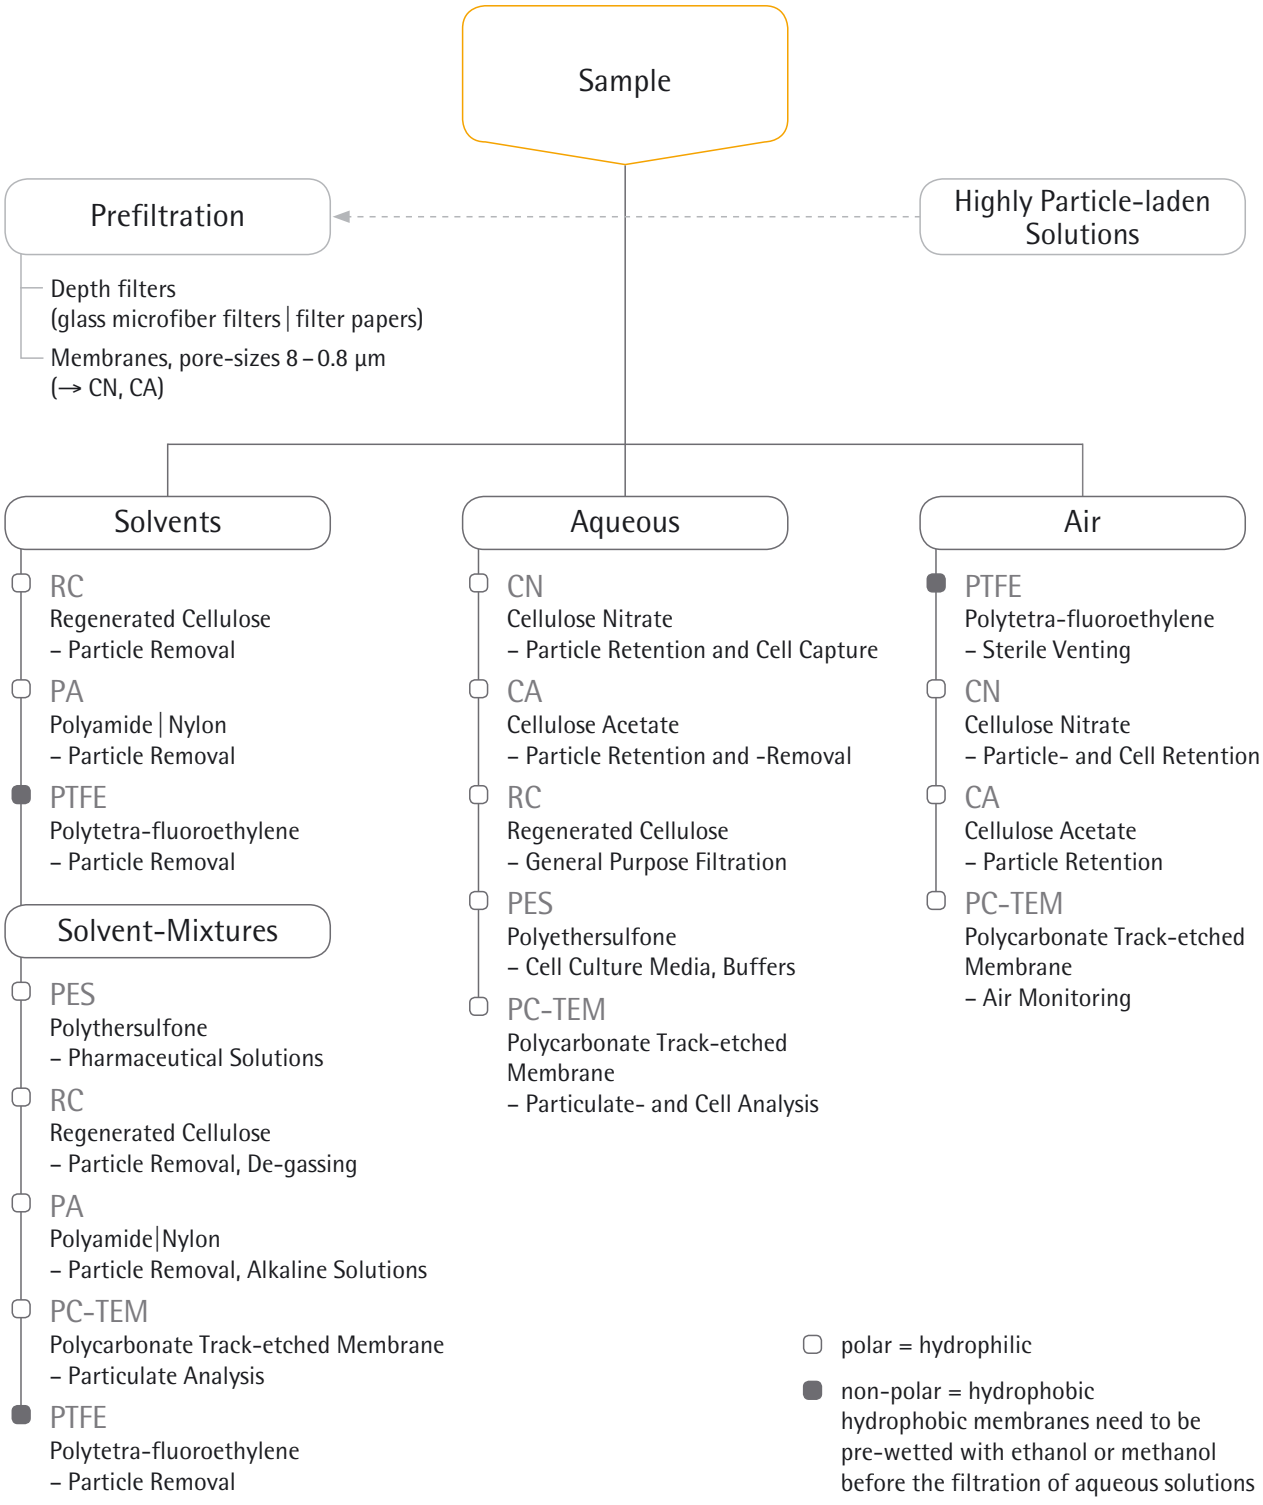
Membrane Filtration – Quick Selection Guide



Cellulose Nitrate

Cellulose nitrate membrane filters are indicated for many general laboratory applications where a membrane with a high non-specific adsorption is suitable. They are hydrophilic, have high flow rates thanks to their symmetric structure and are compatible with aqueous solutions (pH 4-8), hydrocarbons and several other organic solvents. The cellulose nitrate membranes are available in different pore sizes from 0.2 µm to 8 µm.

Technical Specifications

Cellulose Acetate

Cellulose acetate membranes combine high flow rates and thermal stability with very low adsorption characteristics, and are therefore excellently suited for use in pressure filtration devices. They are hydrophilic, have high flow rates thanks to their symmetric structure and are compatible with aqueous solutions (pH 4-8), oils, alcohols and other organic solvents. The 0.2 µm membrane is the filter of choice for sterile filtration of aqueous solutions, such as nutrient media, buffers and sera. The cellulose acetate membranes are available in different pore sizes from 0.2 to 5 µm.

Regenerated Cellulose

The very low adsorption membranes are hydrophilic, solvent-resistant (pH 3-12) and therefore suited for the particle removal from solvents. The membrane is asymmetric and reinforced with nonwoven cellulose.
They are available in two pore sizes: 0.45 µm and 0.2 µm.

Polyethersulfone

Polyethersulfone (PES) membrane filters are hydrophilic, have high flow rates thanks to their symmetric structure, have a low non-specific protein adsorption and are chemically resistant over a pH range of 1 – 14. They are therefore recommended for the filtration of aqueous solutions as well for the protein filtration. Furthermore, the low level of extractables makes them suitable for environmental analysis.

Polyamide

Polyamide membrane filters are hydrophilic and chemically resistant to alkaline solutions and organic solvents. They are therefore recommended for the particle removal from aqueous solutions and solvents for analytical determination such as HPLC, for the sterile filtration of these liquids as well as for applications where a membrane with a relatively high non-specific adsorption is suitable.

Hydrophobic PTFE

The main application of these membrane filters is the filtration of air, gases or chemicals. They are made of PTFE (polytetrafluorethylene) only and are therefore permanently hydrophobic. Unlike other (hydrophilic) filter types, they are not wetted by air humidity, allowing unhindered passage of air at low differential pressures as well. PTFE membrane filters have an excellent chemical compatibility (pH 1-14), so that they are also used for the filtration of solvents and acids, to which other filter types are not resistant. Due to their hydrophobic characteristics, they must be pre-wetted with ethanol or methanol before the filtration of aqueous media.

Polycarbonate Track-Etched

Those white and hydrophilic polycarbonate track-etched membranes are manufactured from high grade polycarbonate film using track-etch technology. Their capillary pore structure is uniform and precise, with a narrow pore size distribution to retain particles on their surface. Track-etched membranes are an excellent choice for accurate fractionation of particulates because of their precise pore size. Track-etch technology offers the user distinct performance advantages when excellent surface capture and high sample visibility are required. Their main applications are particulate analysis, epifluorescence microscopy, fluid clarification, cytology, cell biology, bioassays, water microbiology and environmental analysis.

Re-usable, 13 mm Syringe Filter Holders

For the Ultracleaning of Small Volumes Up to About 10 ml

PTFE Holder for Solvents and Chemicals
Made completely of PTFE, this holder is unaffected by chemicals and contains no trace elements which could be released into the liquid being filtered. It is therefore extremely well suited for particle removal from samples and reagents for analytical methods, such as NMR samples. Other benefits of this application are the low hold-up volume, the easy cleaning and the drying at a temperature of 180 °C. The construction of the holder ensures leak proof sealing without a sealing ring, and avoids twisting of the membrane filter when the top is tightened onto the base.

Technical Specifications

Connectors	Female Luer Lock inlet, luer slip outlet
Chemical compatibility	As for PTFE
Filtration area	0.5 cm^2
Materials	PTFE top and bottom parts
Max. operating pressure	5 bar | 500 kPa | 72.5 psi
Membrane filter diameter	13 mm
Sterilization	By autoclaving (max. 134 °C) or by dry heat (max. 180 °C)
Hold-up volume	Less than 0.03 ml after overcoming the bubble point (0.3 ml before)

Ordering Information

Description	Order No.
13 mm PTFE Syringe Filter Holder	16574

Polycarbonate Holder for Aqueous Solutions
This inexpensive filter holder is made of clear, autoclavable polycarbonate. The silicone gasket enables a leak-free filtration at pressures of up to 7 bar by simply manually screwing it together. Filter supports in the top and bottom parts allow filtration in either direction.

Technical Specifications

Connectors	Female Luer Lock inlet, luer slip outlet
Chemical compatibility	As for polycarbonate and silicone
Filtration area	0.5 cm^2
Materials	Polycarbonate top and bottom part, silicone gasket
Max. operating pressure	7 bar | 700 kPa | 101.57 psi
Membrane filter diameter	13 mm
Sterilization	By autoclaving at 121 °C
Hold-up volume	Less than 0.2 ml after overcoming the bubble point (0.3 ml before)

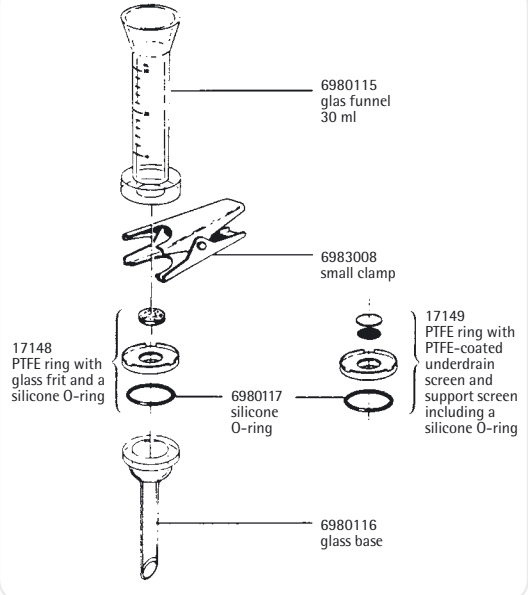
25 mm Glass Vacuum Filter Holder

For Hybridisation Tests, Particle Testing and Clarification

This filter holder is available in two versions differing from each other only in the type of the filter support. The filter with glass frit ensures uniform distribution of retained particles and is therefore recommended, when the residue on the filter surface is of interest. Because it is easy to clean, the device with the PTFE-coated screen support is preferable when the filtrate is required, or when liquids difficult to remove from glass frits must be examined. The PTFE ring, which holds the glass frit and the screen support, allows for the autoclaving of the devices with a filter in position and protects the edge of the glass frit from breakage and potential leakage. It has a rim around the upper edge to simplify the positioning of the membrane filter when inserted and a silicone O-ring in the underside for a leak-proof seal on the filtrate side. The funnel-shaped top part simplifies filling in the sample.

Technical Specifications

Outlet spout	12 mm ∅
Parts and materials	Borosilicate glass funnel and base PTFE | glass filter support (type 16306) or PTFE | stainless steel filter support, coated with PTFE (type 16315) Silicone O-ring 25 × 3 mm Anodised Aluminium clamp
Chemical compatibility	As for glass, PTFE and silicone. The silicone O-ring can be replaced by a fluoroelastomer O-ring (order no. 00118)
Funnel capacity	30 ml
Filtration area	3 cm^2
Max. operating pressure	Only for vacuum
Suitable membrane filter diameter	25 mm (or 24 mm)
Sterilization	By autoclaving (max. 134 °C) or by dry heat (max. 180 °C)



Ordering Information

Description	Order No.
Glass vacuum filtration holder for 25 mm (or 24 mm) membrane filter, with glass frit filter support	16306
Glass vacuum filtration holder for 25 mm (or 24 mm) membrane filter, with PTFE-coated screen filter support	16315

Replacement parts are shown in the diagram.

50 mm Glass Vacuum Filter Holder

For Particle Testing or Clarification and Sterile Filtration

This filter holder is available in two versions differing from each other only in the type of the filter support. The device with glass frit ensures uniform distribution of retained particles and is therefore recommended, when the residue on the filter surface is of interest. Because it is easy to clean, the device with the PTFE-coated screen support is preferable when the filtrate is required, or when liquids difficult to remove from glass frits must be examined. The PTFE ring, which holds the glass frit and the screen support, allows the autoclaving of the devices with a filter in position and protects the edge of the glass frit from breakage and potential leakage. It has a rim around the upper edge to simplify the positioning of the membrane filter when inserted and a silicone O-ring in the underside for a leak-proof seal on the filtrate side.

Technical Specifications

Outlet spouts	15 mm ∅
Parts and materials	Borosilicate glass funnel and base Silicone caoutchouc lid PTFE | glass filter support (type 16307) or PTFE | stainless steel filter support, coated with PTFE (type 16316) Silicone O-ring 45 × 3 mm Anodised Aluminium clamp
Chemical compatibility	As for glass, PTFE and silicone. The silicone O-ring can be replaced by a fluoroelastomer O-ring (order no. 00124).
Funnel capacity	250 ml
Filtration area	12.5 cm^2
Max. operating pressure	Only for vacuum
Suitable membrane filter diameter	50 mm (or 47 mm)
Sterilization	By autoclaving (max. 134 °C) or by dry heat (max. 180 °C)

Description	Order No.
Glass vacuum filtration holder for 50 mm (or 47 mm) membrane filter, with glass frit filter support	16307
Glass vacuum filtration holder for 50 mm (or 47 mm) membrane filter, with PTFE-coated screen filter support	16316

Replacement parts are shown in the diagram.

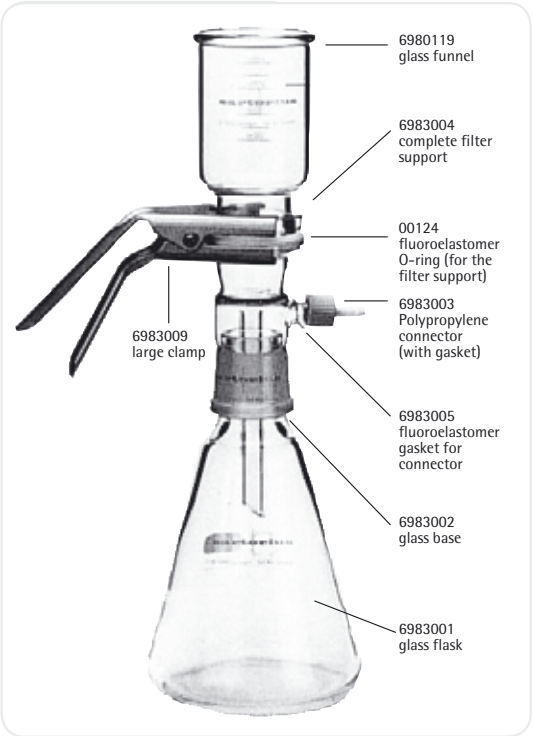
All-Glass Vacuum Filter Holder

For Analytical Determinations, Particle Removal from Solvents

All areas, where liquid and device can come into direct contact, are made of glass or PTFE. The device, in combination with solvent-resistant, hydrophilic RC-membranes, is therefore ideal for ultracleaning and degassing solvents and solvent mixtures for HPLC, GC and AA. Convenience of handling is ensured by several beneficial features. A 6 mm wide non-ground rim above the ground glass neck of the suction flask prevents the filtrate from contacting grease on the ground glass surface and so avoids its contamination while being poured out of the flask. The hose nipple connector is made of polypropylene for safe connection of the vacuum hose. The filtrate outlet spout ends well below the entrance to this hose nipple.

Technical Specifications

Parts and materials	Borosilicate glass funnel, base and flask, sintered glass frit in a PTFE ring and fluoroelastomer O-ring (45 × 3 mm) underneath, anodized aluminium clamp
Chemical compatibility	As for glass and PTFE
Funnel capacity	250 ml
Capacity of the filtrate flask	1 liter
Filtration area	12.5 cm^2
Max. operating pressure	Only for vacuum
Suitable membrane filter diameter	50 mm (or 47 mm), 40 mm prefilter
Sterilization (without connector)	By autoclaving (max. 134 °C) or by dry heat (max. 180 °C)



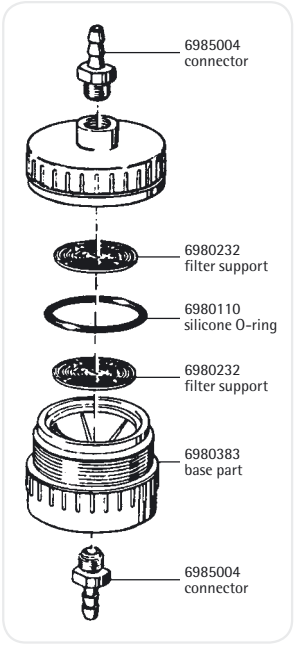
Ordering Information

Description	Order No.
All-glass vacuum filter holder for 50 mm (or 47 mm) membrane filter, with vacuum-resistant flask, capacity 1 liter	16309

Replacement parts are shown in the diagram.

Polycarbonate In-Line Filter Holder

For the Filtration of Liter Volumes of Aqueous Solutions



This holder is made of stable, autoclavable polycarbonate. This practical holder is suitable for many simple laboratory filtrations. It can be connected to a peristaltic pump or a pressure container. The bell-shaped base protects the filtrate from repeated contamination while flowing in a receiver. The holder is charakterized by an excellent resistance to pressure and density setting by simply hand-tightening. The transparent top part allows the visual control of the correct fit of the O-ring. The hose nipples can be replaced by luer connectors to use it as a large area syringe filter holder.

Technical Specifications

Chemical compatibility	As for polycarbonate, polypropylene and silicone
Filtration area	12.5 cm^2
Weight	83 g
Threads for connectors	M 12 × 1 female thread
Materials	Polycarbonate top part, base part and hose nipple, polypropylene filter support, silicone O-ring (40 × 5 mm)
Max. operating pressure	7 bar | 700 kPa | 101.5 psi
Suitable membrane filter diameter	50 mm (40 mm prefilter)
Sterilization	By autoclaving at 121 °C The material withstands repeated cycles, provided aggressive cleaning agents are completely washed off and that the boiler water does not contain anti-corrosive or anti-scaling additives.

Ordering Information

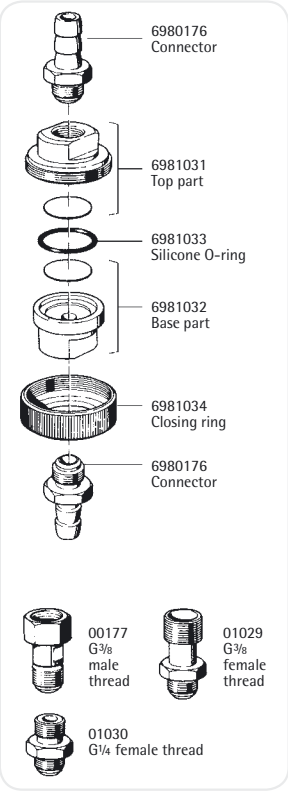
Description	Order No.
Polycarbonate in-line filter holder for 50 mm membrane filter, pack of 5.	16508----------B

Replacement parts are shown in the diagram.

25 mm Stainless Steel Filter Holder

For In-Line Filtration

The G¼ connection threads with density barrel, guarantee leak-proof sealing of the hose nipple and the holder without sealing rings. Other connectors, available as accessories, fit the holder onto reducing valves or pumps with G¼ female thread (order no. 01030) or G⅜ female thread order no. 01029) or onto pressure tanks with G⅜ male thread (order no. 00177).



Technical Specifications

Connectors	Hose nipples DN10
Filtration area	3 cm^2
Weight	ca. 170 g
Materials	Stainless steel, except silicone O-ring (21 × 2 mm) and aluminium closing ring
Max. operating pressure	5 bar | 500 kPa | 72.5 psi
Suitable membrane filter	25 mm (20 mm prefilter for the filtration of liquids only)
Sterilization	By autoclaving (max. 134 °C) or by dry heat (max. 180 °C)

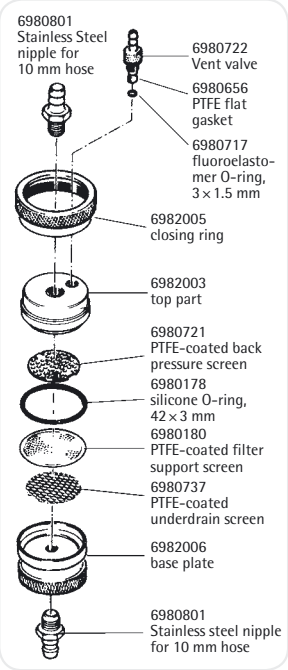
Ordering Information

Description	Order No.
Stainless steel pressure filter holder for 25 mm ∅ membrane filter.	16251

Replacement parts are shown in the diagram.

47 mm Stainless Steel Filter Holder

For In-Line Filtration



The filter holder is suitable for a pressure of up to 20 bar. The inletside valve is convenient for the intermittent run-off of waste water. Other connectors, available as accessories, fit the holder onto reducing valves or pumps with G3/8 female thread (order no. 17089) or onto pressure tanks with G3/8 male thread (order no. 17069) or on taps with G3/4 male thread (order no. 17068).

Technical Specifications

Connectors	Hose nipples DN10
Connection thread	M12 × 1
Filtration area	13 cm^2
Weight	ca. 490 g
Materials	Stainless steel, except silicone O-ring (42 × 3 mm), PTFE and fluoroelastomer valve seals
Max. operating pressure	20 bar | 2,000 kPa | 290 psi
Suitable membrane filter	47 mm (40 mm prefilter)
Sterilization	By autoclaving (max. 134 °C) or by dry heat (max. 180 °C)

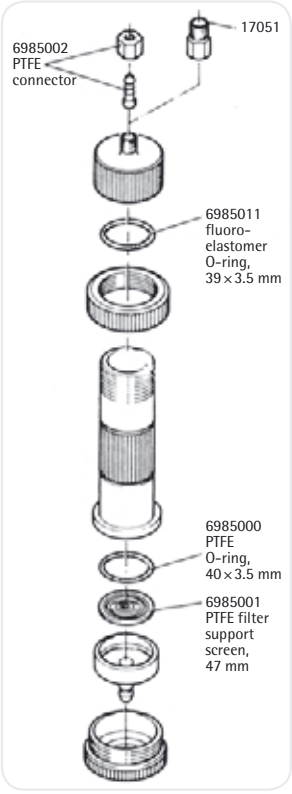
Ordering Information

Description	Order No.
Stainless steel filter holder for 47 mm ∅ membrane filter.	16254

Replacement parts are shown in the diagram.

Chemical-resistant PTFE Filter Holder

For the Filtration of Aggressive Liquids



The holder hinders the release trace elements into the filtrate and is resistant to almost all chemicals. The fluoroelastomer O-ring in the top part allows easy hand tightening, and can be replaced by a PTFE O-ring, order no. 17039. The 6 mm outlet nipple is an integral part of the base, the 10 mm inlet hose nipple can be replaced by a G3/8 connector, order no. 17051.

Technical Specifications

Chemical compatibility	As for PTFE and fluoroelastomer
Filtration area	12.5 cm^2
Thread for inlet connector	M 14 × 1.5 male thread
Materials	Top part, barrel, base part: corrugated iron, hose nipples and filter support with 40 × 3.5 mm O-ring: PTFE, locking rings: aluminium 39 × 3.5 mm fluoroelastomer O-ring (top part)
Max. operating pressure	5 bar | 500 kPa | 72.5 psi
Suitable membrane filter diameter	47 mm
Sterilization	By autoclaving (max 134 °C) or by dry heat (180 °C)

Ordering Information

Description	Order No.
PTFE pressure filter holder, 47 mm, with 200 ml capacity.	16579

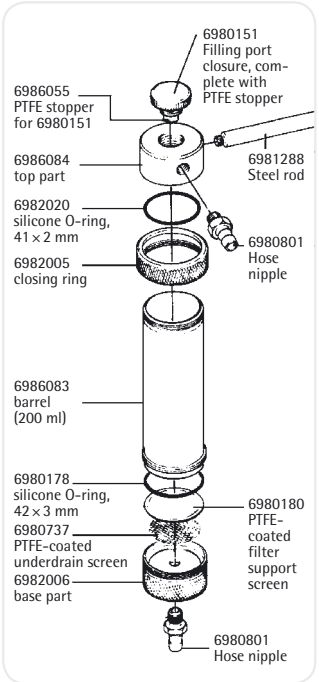
Replacement Parts

Description	Order No.
PTFE O-ring, 40 × 3.5 mm	6985000
PTFE Connector	6985002
PTFE filter support screen, 47 mm	6985001
Fluoroelastomer O-ring, 39 × 3.5 mm	6985011
PTFE O-ring, 39 × 3.5 mm	17039
G3/8 connector	17051

Other replacement parts are shown in the diagram.

Stainless Steel Pressure Filter Holder

For the Filtration of Up to 5 Liter Volumes



A practical filter holder for many laboratory filtrations. It can be attached to a tripod with the help of a steel rod which can be screwed in. The hose nipple is screwed into the side of the top part, leaving room for a large filling opening. This makes pouring in the sample easier, and the sample can be refilled without removing the tube connection to the pressure source. Leak-proof sealing is achieved by hand-tightening the closing ring. For the filtration of small volumes (up to about 200 ml of soil samples or viscous liquids, such as oils), the holder is connected directly to a pressure source.
For the filtration of up to 5 liter volumes of relatively easily filterable liquids (e.g. buffer solutions, solutions for cell counters and tissue culture solutions), it is used in combination with a pressure tank.

Technical Specifications

Chemical compatibility	As for stainless steel, PTFE and silicone. If required, the silicone O-ring in the filter support can be replaced by a fluoroelastomer O-ring 00179 or a PTFE O-ring 17038 (by reducing the max. operating pressure to 4 bar | 58 psi); the silicone O-ring in the top part can be replaced by a fluoroelastomer O-ring 17145.
Filtration area	13 cm^2
Weight	960 g
Threads for connectors	M 12 × 1 female thread
Materials	Top part, barrel, base part, corrugated iron, closing ring, closure cap, back pressure screen and stainless steel hose nipples 1.4401 (AISI 316), PTFE-coated stainless steel filter support, silicone O-rings, 41 × 2 mm (top part) and 42 × 3 mm (filter support), PTFE-sealing (cap).
Max. operating pressure	10 bar | 1,000 kPa | 145 psi
Suitable membrane filter diameter	47 mm (prefilter, 42 mm)
Sterilization	By autoclaving (max 134 °C) or by dry heat (180 °C)

Ordering Information

Description	Order No.
Stainless steel pressure filter holder	16249

Replacement Parts

Description	Order No.
Fluoroelastomer O-ring, 42 × 3 mm	00179
PTFE O-ring, 42 × 3 mm	17038
Fluoroelastomer O-ring for upper part, 41 × 2 mm	17145

Other replacement parts are shown in the diagram.

Combisart® Manifolds

1-, 3- and 6-Branch

Made of high-grade stainless steel (B.S. 304S3 | AISI 304); accommodates any type of vacuum funnel. Stainless steel three-way valves (taps) allow the vacuum for each filter holder to be individually controlled and each holder to be sterilely vented. The low height of the manifold ports is particularly advantageous for working on a clean bench.

Ordering Information

Combisart® Manifolds, without Base Support and Frit	Order No.
Combisart® 1-branch manifold	16844
Combisart® 3-branch manifold	16842
Combisart® 6-branch manifold	16843

Combisart® Sets, Stainless Steel Capacity	Order No.
1-branch 1 × 100 ml	16844-CS
1-branch 1 × 500 ml	16845-CS
3-branch 3 × 100 ml	16824-CS
3-branch 3 × 500 ml	16828-CS
6-branch 6 × 100 ml	16832-CS
6-branch 6 × 500 ml	16831-CS

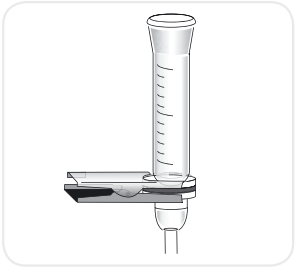
In each set stainless steel funnels with lids are preassembled.

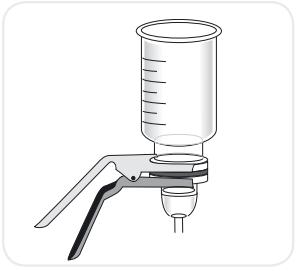
Accessories and Replacement Parts

Description	Pack Size	Order No.
Plug, conical, to close the venting hole beside the 3-way-valve	10	6980225
Silicone O-ring for manifold female threads	3	6980235

Glass Filter Holders; 30, 250 ml

For Particle Counting





Glass Filter Holders
Two compact vacuum filter holders for easy particulate analysis. Both the top and bottom part of the filter holders are easily and securely fastened together using the metal clamp. The center-ing rim on the filter support ensures correct positioning of the membrane filter. The glass frit filter support guarantees uniform distribution of retained particles on the filter surface.

Ordering Information

Order No.	Description	
16306	Glass filter holder	30 ml
	Filter diameter	25 mm (or 24 mm) Prefilter, 20 mm
	Filtration area	3 cm^2
	Capacity	30 ml
	Outlet	12 mm outer diameter
16307	Glass filter holder	250 ml
	Filter diameter	47 mm (or 50 mm) Prefilter, 40 mm
	Filtration area	12.5 cm^2
	Capacity	250 ml
	Outlet	15 mm outer diameter

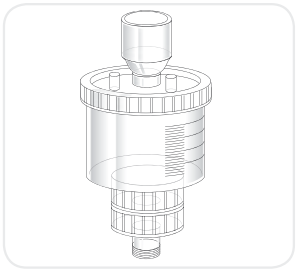
Adapter, 16836 | Adapter, 16837
For use of a glass filter holder, 16306 or 16307, on a Combisart® stainless steel manifold.

Ordering Information

Description	Order No.
Adapter with 11 mm opening in stopper; for using filter holder 16306 on a Combisart® manifold	16836
Replacement stopper for 16836	00280
Adapter with 14 mm opening in stopper; for using filter holder 16307 on a Combisart® manifold	16837
Replacement stopper for 16837	00281

Polycarbonate Filter Holders

For Particle Counting



Polycarbonate Filter Holder, 250 ml
This reusable, practical filter holder made of autoclavable plastic is ideal for analytical testing outside the laboratory. For use of 47 mm membrane filters.

Outlet: TR 20 × 2 mm male thread

Ordering Information

Description	Order No.
Polycarbonate filter holder, 250 ml	16511

Ready-to-Use Biosart® 250 Funnels

For Particle Counting

Biosart® 250 Funnel

The Biosart® 250 Funnel has been specially designed for analytical quality assurance. The sterile 250 ml plastic funnel guarantees fast filtration and high sample throughputs during routine testing. Its large inner diameter allows high flow rates, and the tapered inner walls permit thorough flushing of the funnel, after filtration.

Ordering Information

Description	Order No.
Biosart® 250 Funnel, 50 units, sterile-packaged	16407-25-ALK

Single Support, 16840

For adapting a Biosart® 250 Funnel for use on a Combisart® stainless steel manifold.

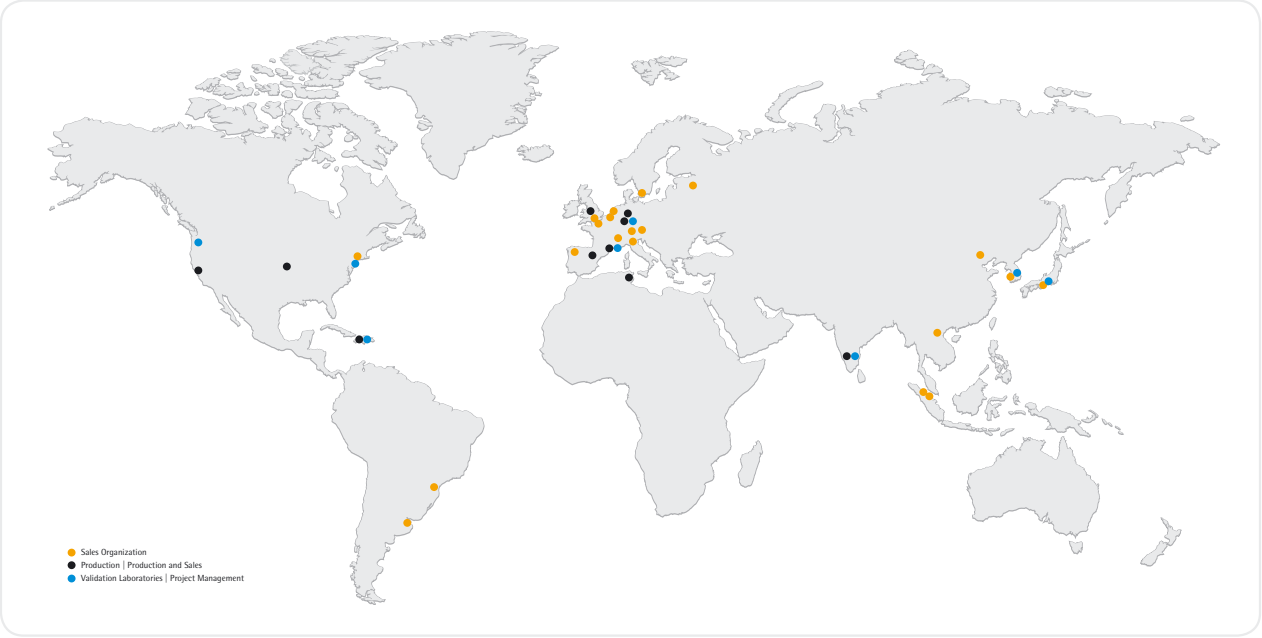
Ordering Information

Description	Order No.
Stainless steel filter support for stainless steel manifold.	16840

CONFIDENCE® – Validation Services

Our Services at a Glance

Multi-site laboratories offer globally integrated Validation Services.



Every Sartorius Stedim Biotech product used in critical steps in the pharmaceutical industry is manufactured with complete traceability of materials. The extensive data obtained in our validation guides and extractables guides form a comprehensive basis for the safety assessment of your respective process and drug product.
Given the latest developments in regulatory requirements, our in-depth knowledge of actual drug product testing is a key element of our CONFIDENCE® Validation Services.

Our product array includes, but is not limited to, the following:

Filter Elements	Fluid Management Containers	Polymer-based Process Components
Extractables | Leachables Studies	Extractables | Leachables Studies	Extractables | Leachables Studies
Physico-Chemical Studies	Physico-Chemical Studies	
Microbiological Studies	Microbiological Studies	

Time To Market
Make the choice that helps bring your products to market rapidly – on time, every time. Ask us about our day commitment program.

Explore your possibilities – we continue to lead and innovate in the field of validation studies to increase the added value of our services offered to the biopharmaceutical and pharmaceutical industries.
Visit our microsite at www.sartorius-stedim.com/confidence
